

# Gaia UX App & System Updates

Process overview

- Device checks for pending updates.
- Checks can be manual or automatic.
- User can specify connection restrictions and schedule of automatic checks.

- Notifications prompt user when updates are found.
- User can tap Notification to open App or System update “utilities”.

- Update “utilities” present update details and controls for initiating / monitoring downloads.
- The utilities are subsections of the System app.
- There are two utilities:  
**App Update Utility**  
**System Update Utility**
- User initiates or defers download(s).

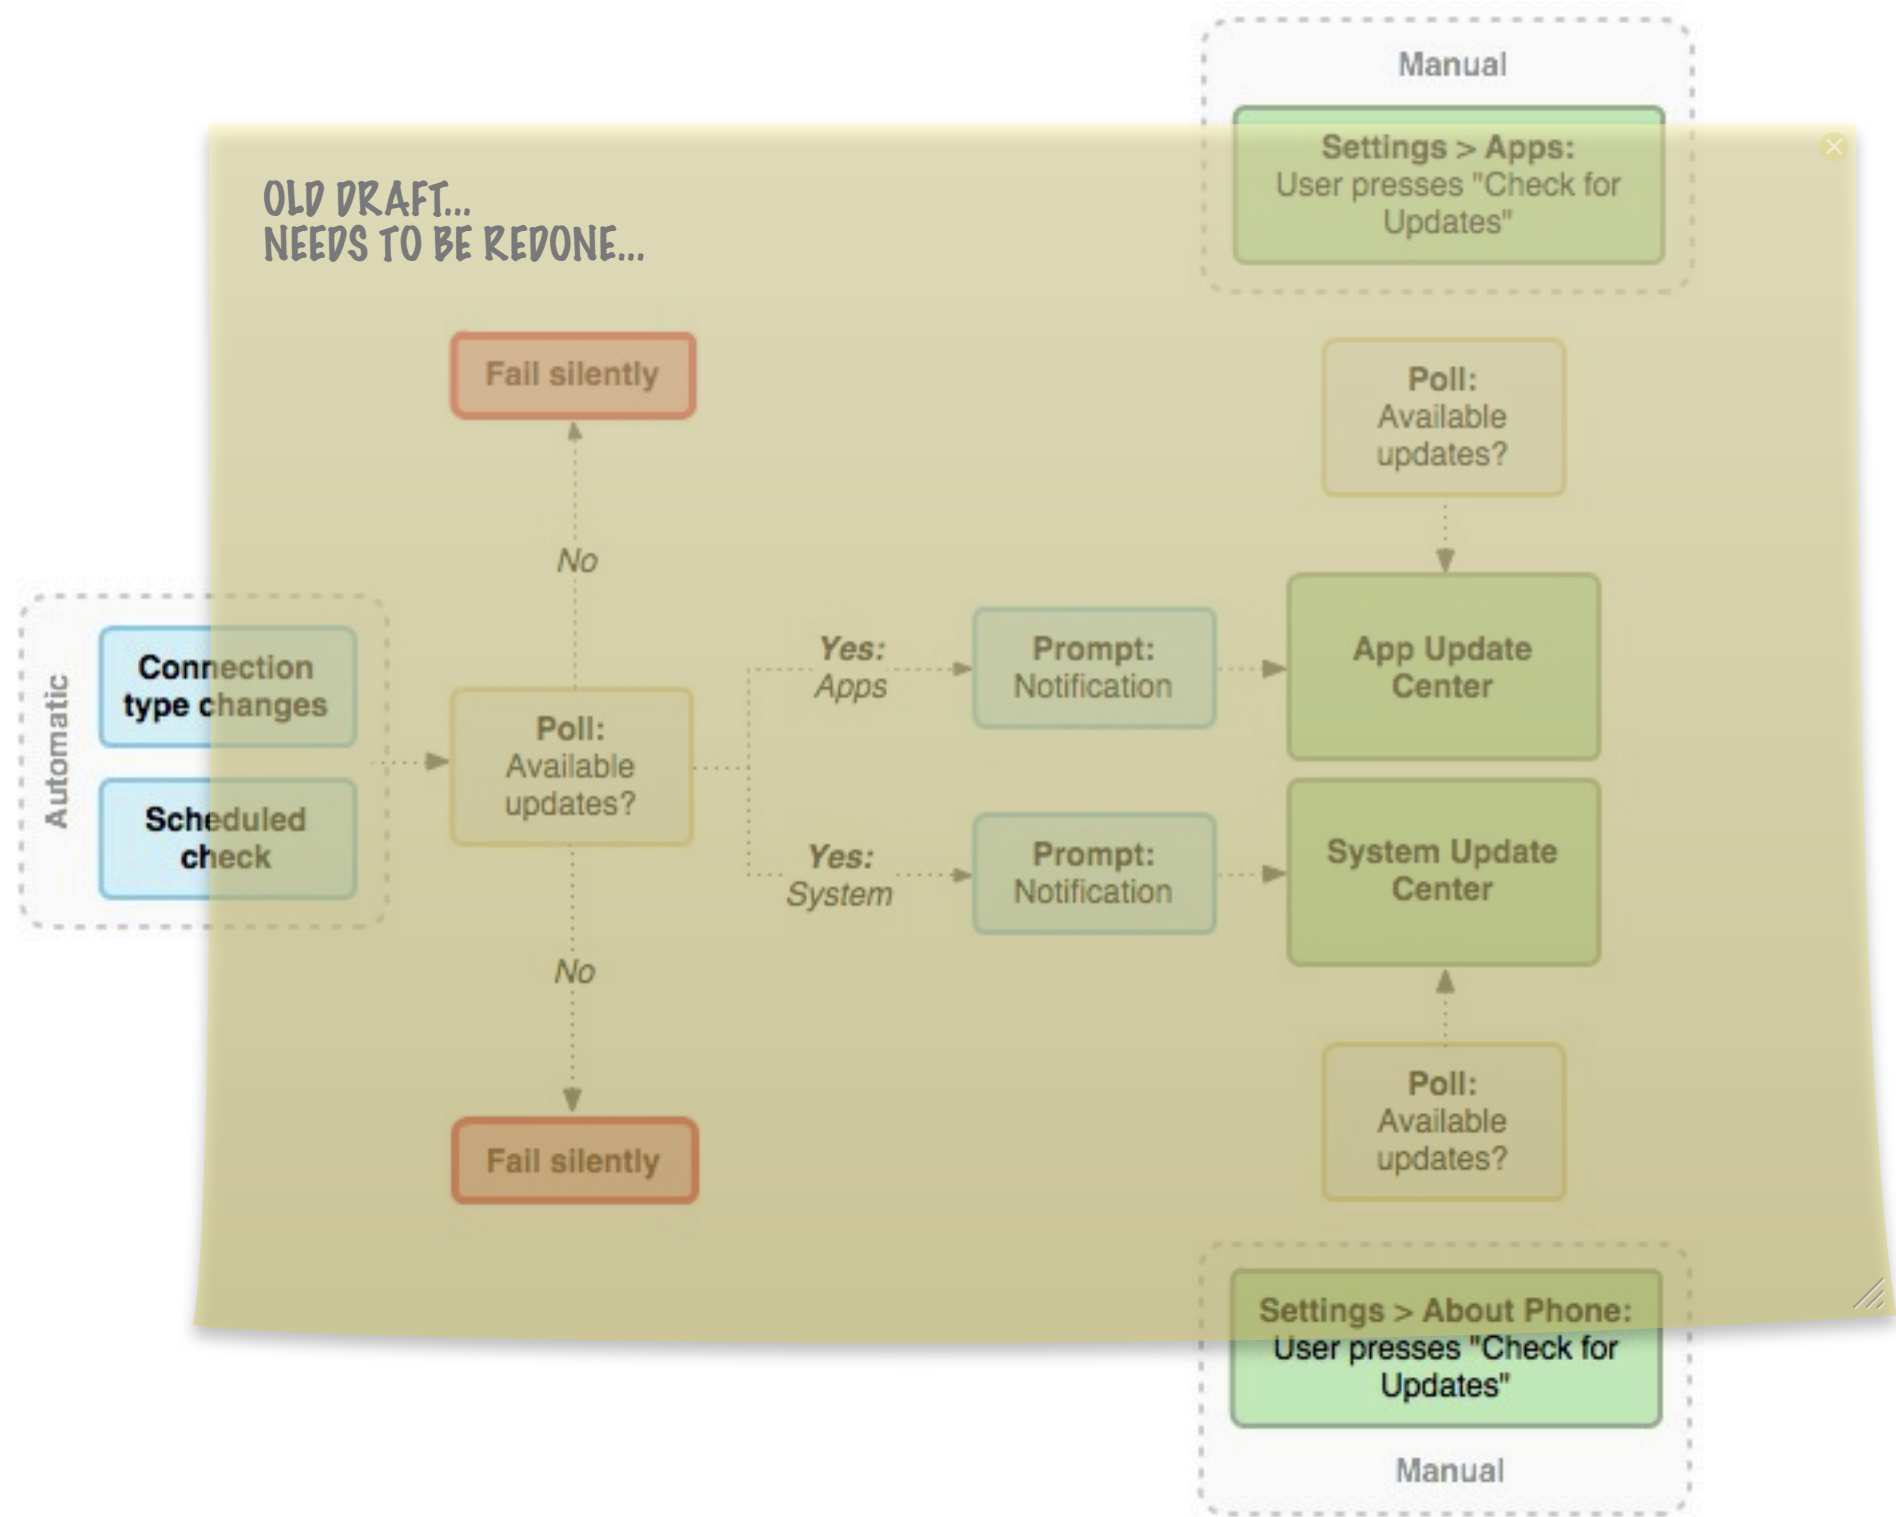

- Status Bar indicator appears while download is active.
- Progress bars in Notification Center enable user to track download status.
- Downloads can be paused or canceled by user.
- Downloads can be paused and resumed automatically in response to connection type changes, device power status, etc.
- All downloads are throttled to a percentage of available bandwidth.

- App updates install silently once download is complete.
- System updates prompt the user once download is complete. User must manually initiate install.
- System updates require either a session restart or device restart, depending on the update type.

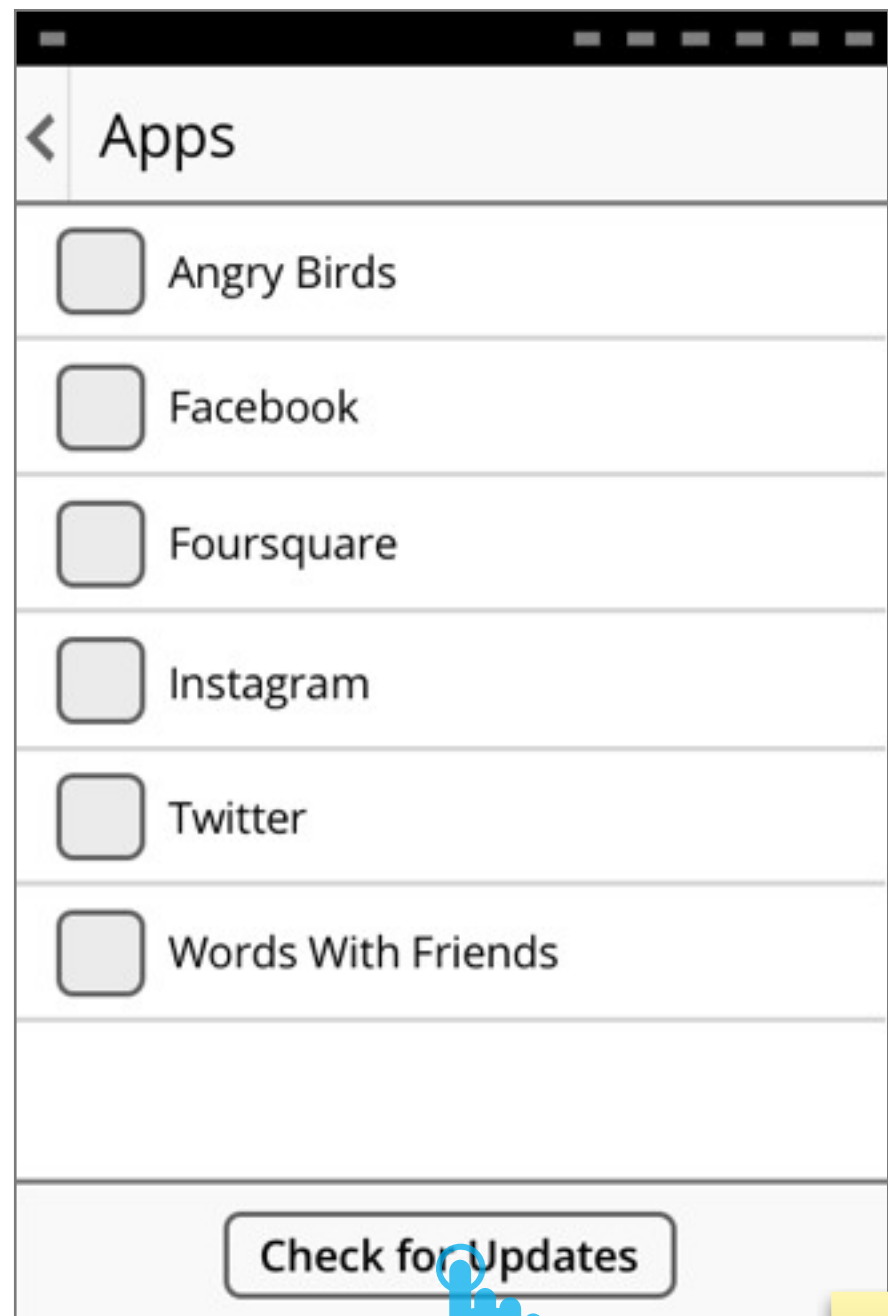

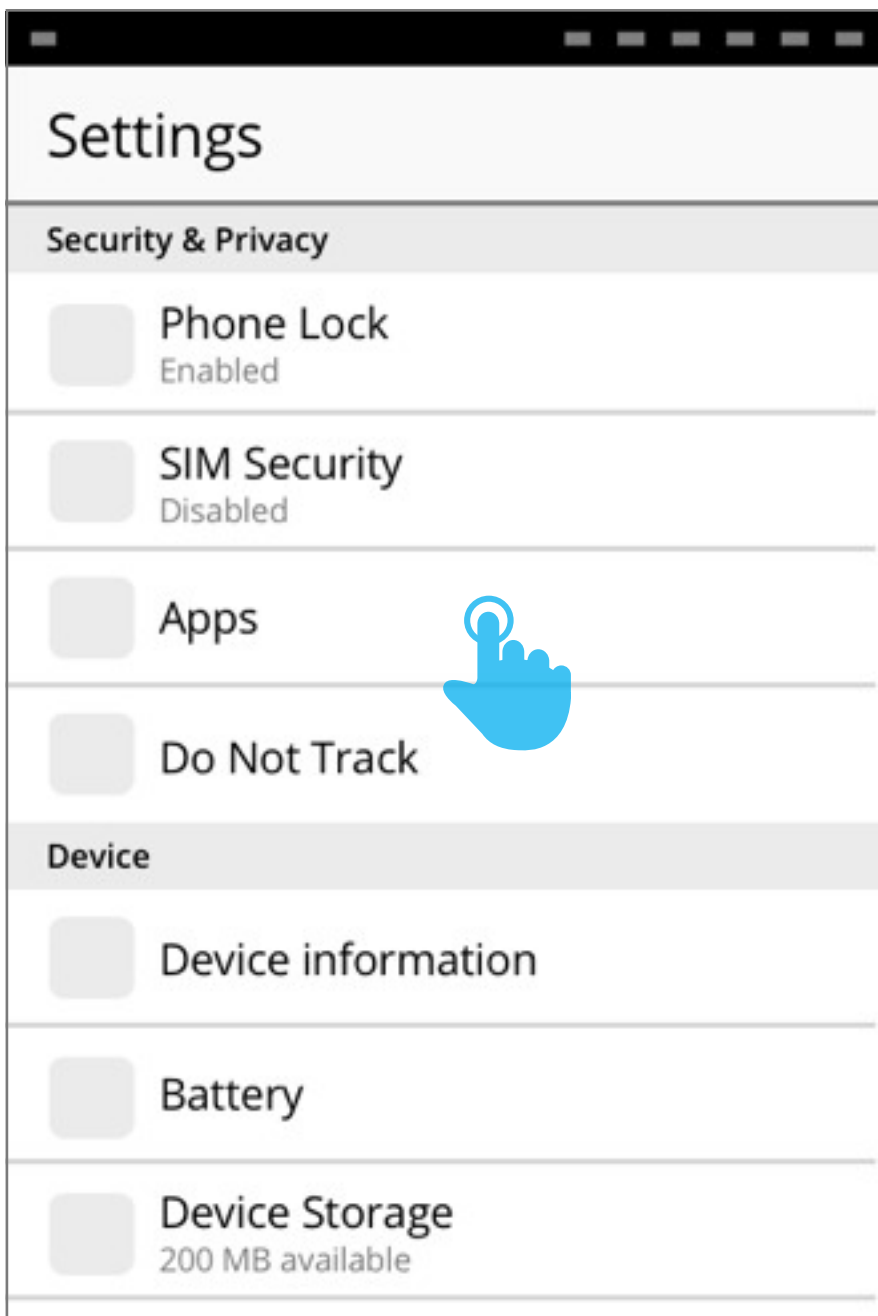

Updates can be checked for manually or automatically.

Automatic checks

- Scheduled automatic update checks are restricted to WiFi or zero-rated connections only.
- If there is no active WiFi or zero-rated connection at the scheduled check time, the check fails silently.
- When the connection type changes to WiFi or zero-rated, the system checks to see if any scheduled checks were missed. If true, the system checks for an update immediately, instead of waiting until the next scheduled time.
- User can set the frequency of scheduled update checks from the **Settings** within the **App Update** and **System Update** utilities.

Check: App Updates (Manual)

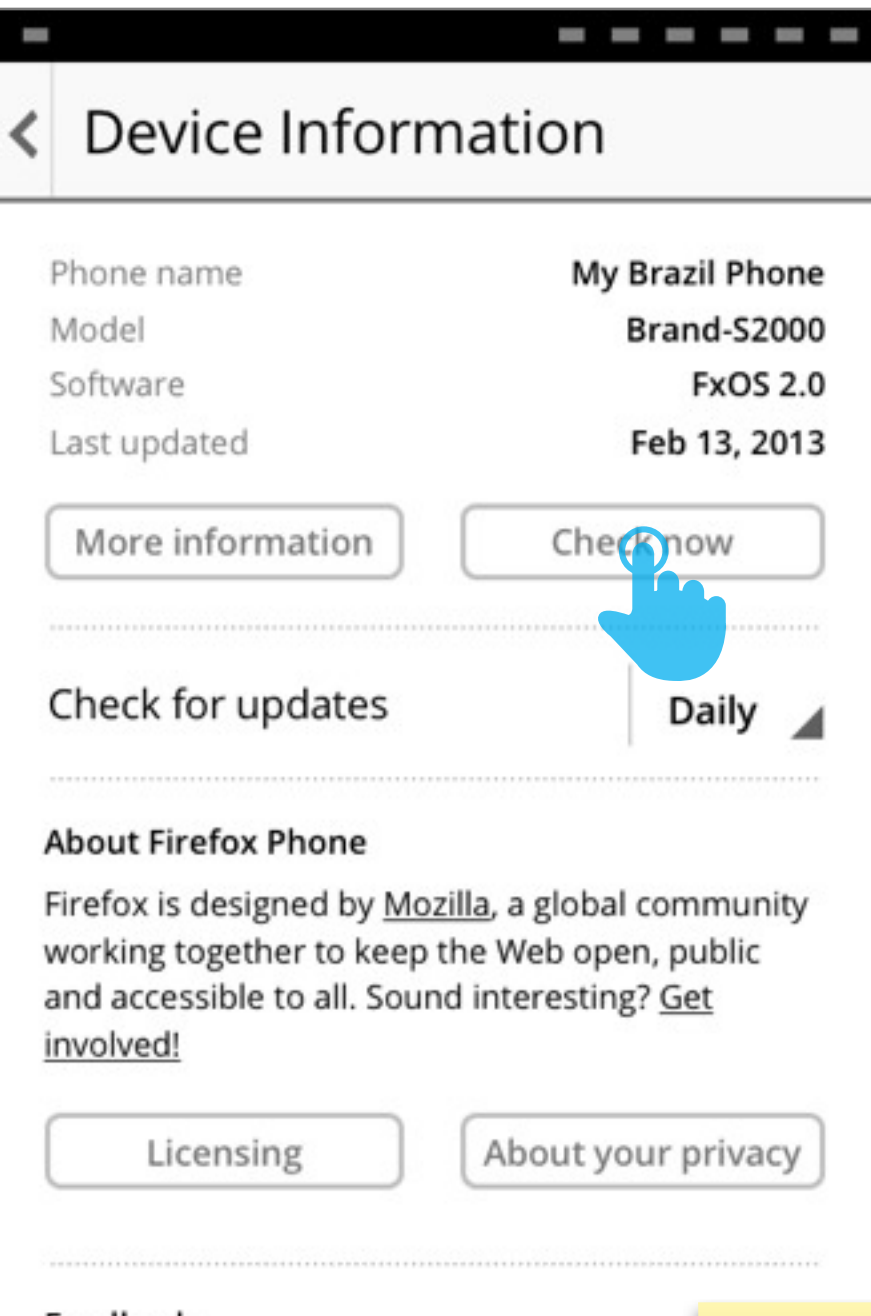

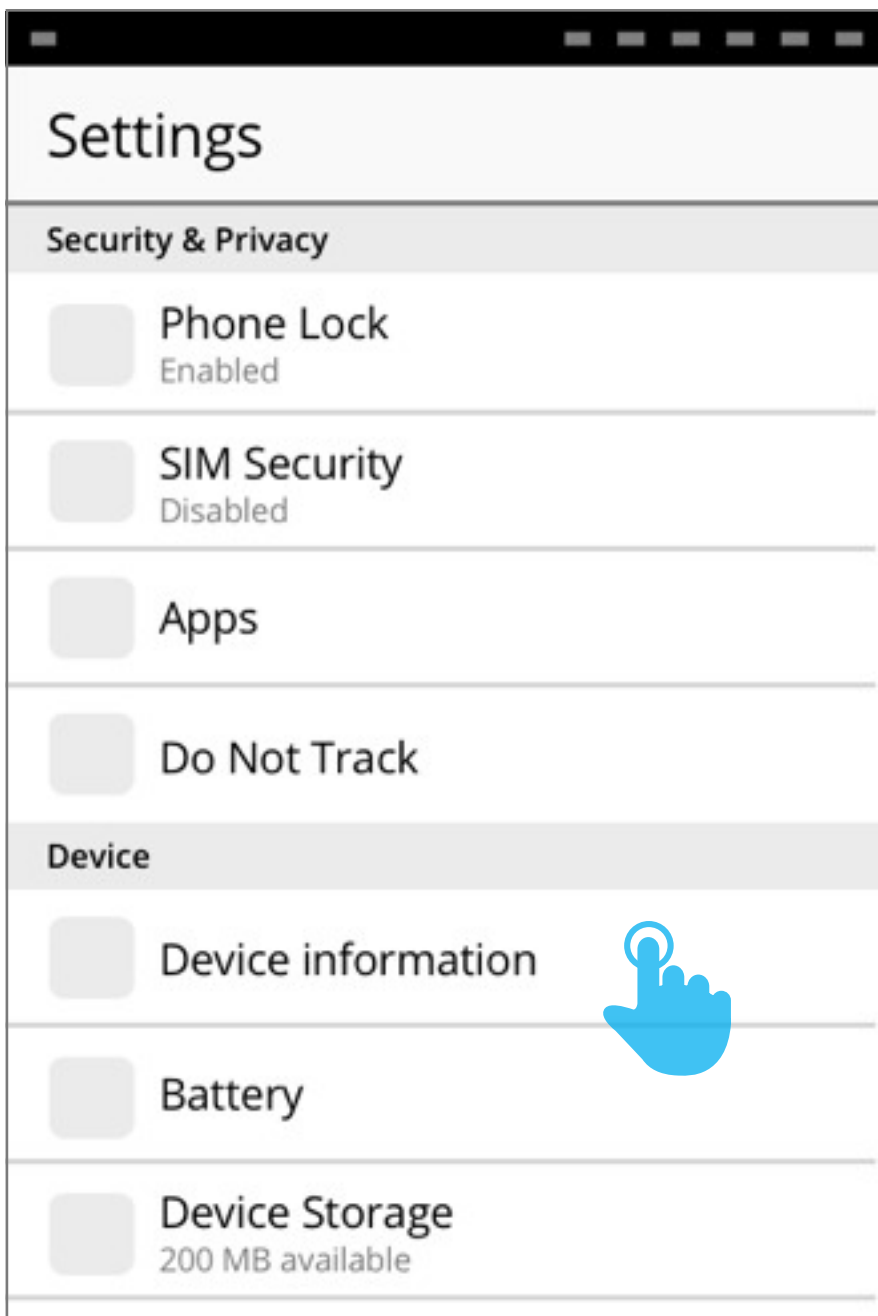

Updates found:  
Open: App Update  
Utility > Updates tab.

Updates not found:  
Display Banner with:  
"No updates found"

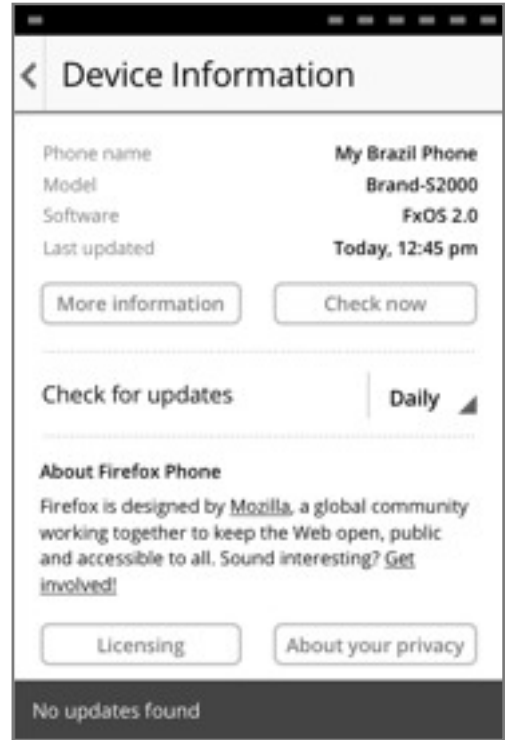

Need to add:  
"No connection" edge case.

Updates found:  
Open: System Update Utility.

Updates not found:  
Display Banner with: "No updates found".

**Need to add:**

- "No connection" edge case.
- "Current phone number" as one of fields in "Device Information" page?

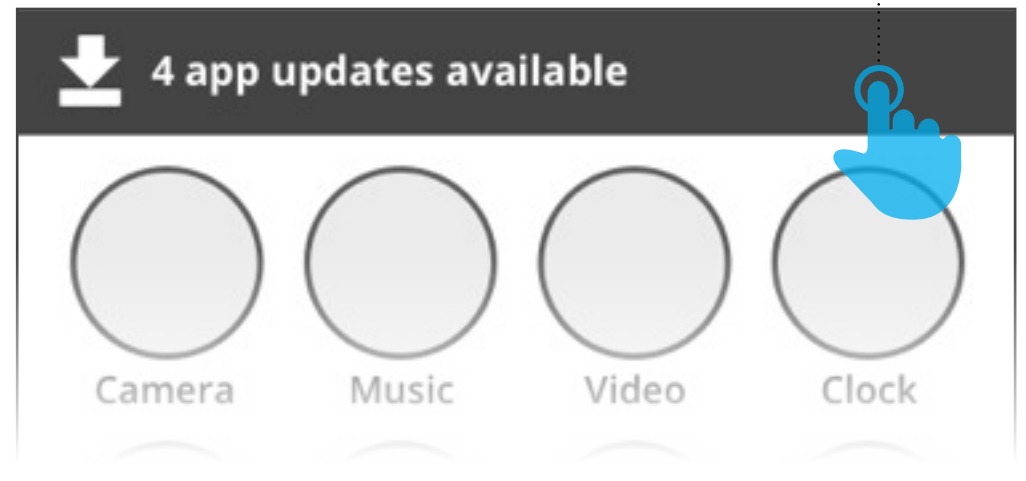

Prompt

Notifications prompt user when updates are available.

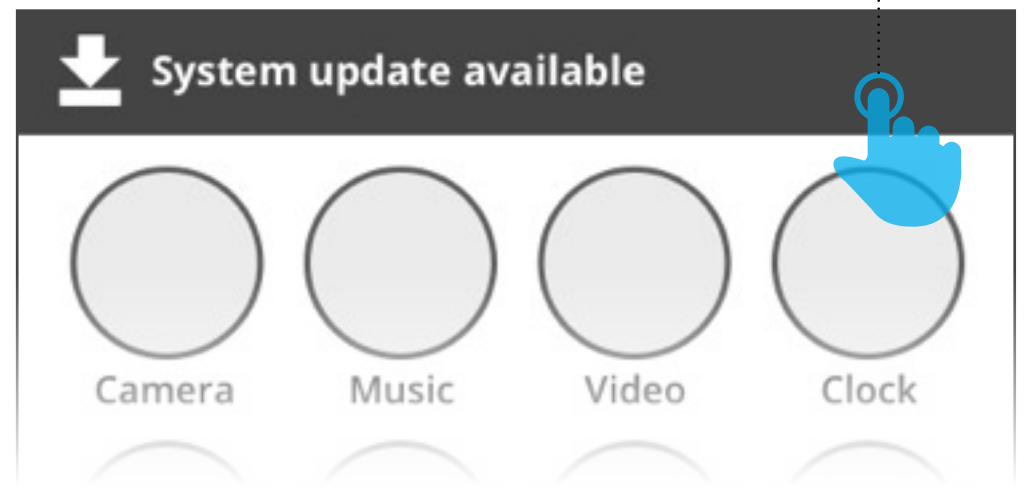

Notifications appear when automatic checks find available updates. Update notifications behave like standard Notifications:

- They appear and hold on-screen for several seconds.
- User can press to open the respective update Utility (App or System).
- Once they are dismissed or time out they are added to the Notification Center.
- Within the Notification Center, they are listed chronologically. Newer notifications push them down the list.
- **Image:** download icon  
**Title:** "N app updates available"  
**Body:** None

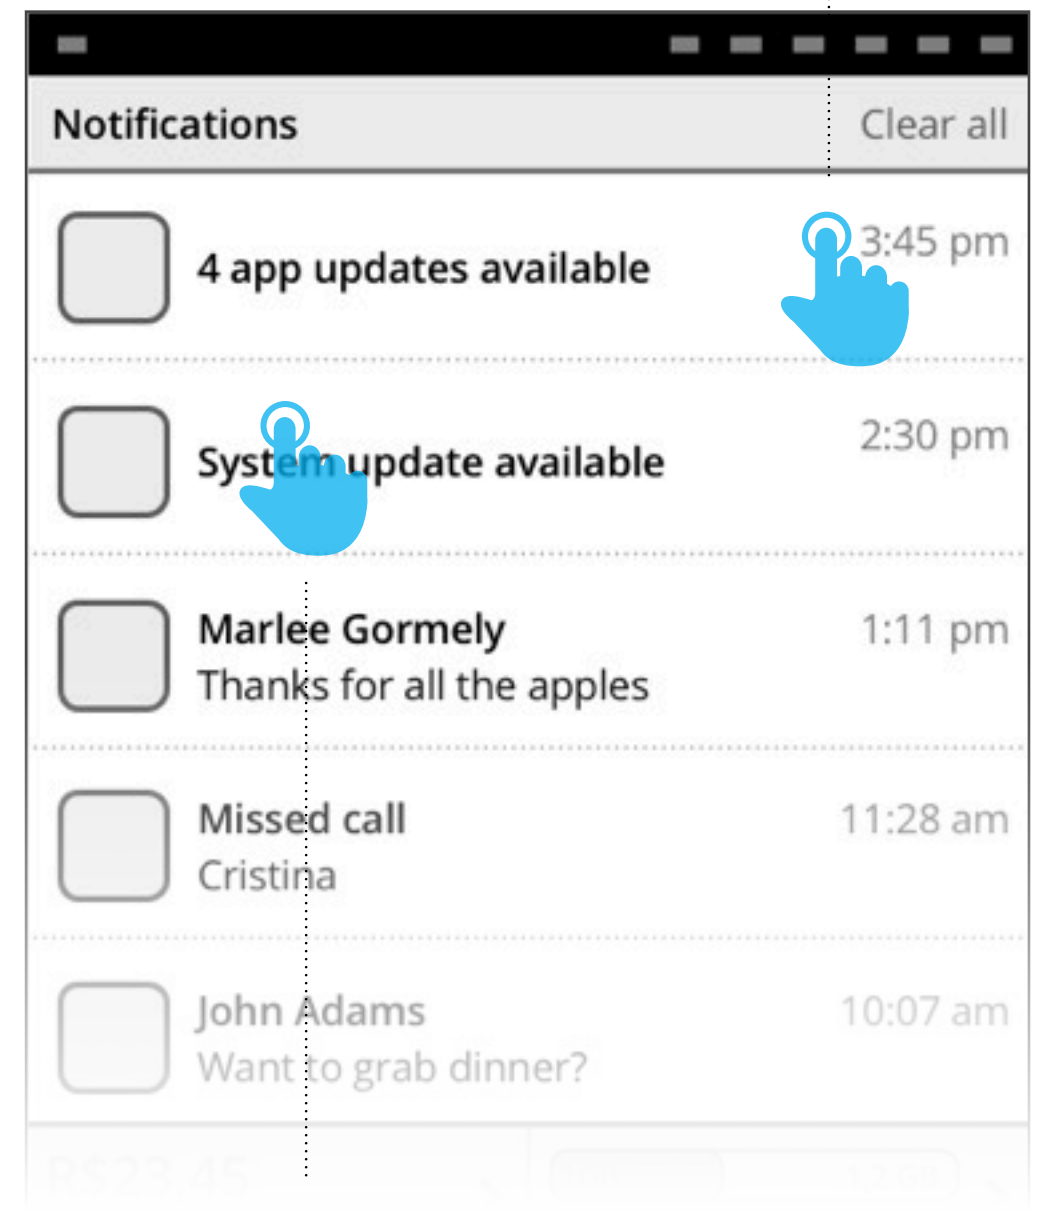

Notification Open App Update Utility

Notification Open System Update Utility

Notification Center Open System Update Utility

Open App Update Utility

Review & Initiate:  
App Update Utility

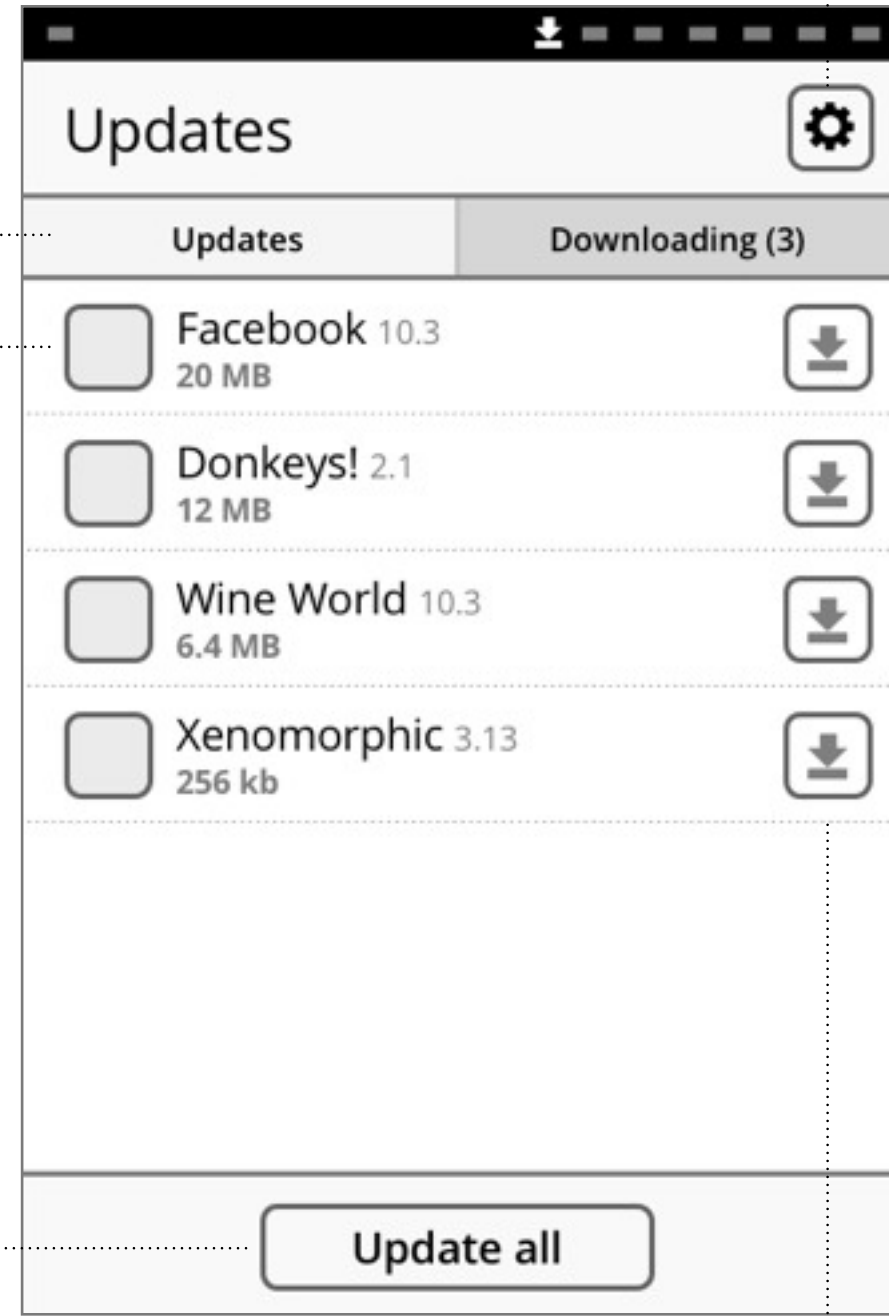

Open Settings

Close Settings

Tabs

Alphabetical list of available updates. Each displays:  
• App icon  
• App name  
• Version number  
• Download size

Download all listed app updates

Updates tab

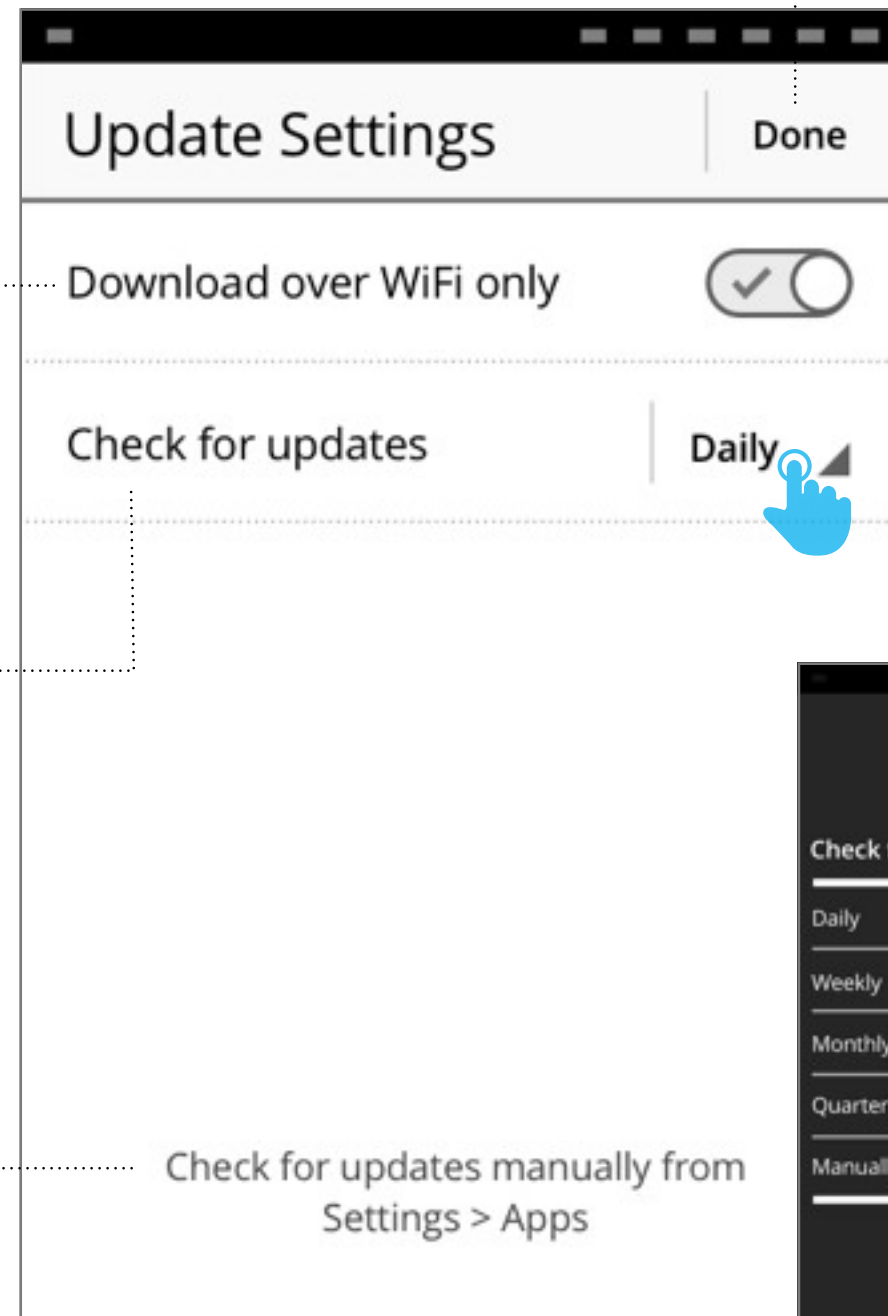

Download individual app update

When set to True, update downloads and scheduled checks will only happen when WiFi is Connected.

Users can reduce the potential annoyance and bandwidth consumption of update checks by turning down their frequency

Tip

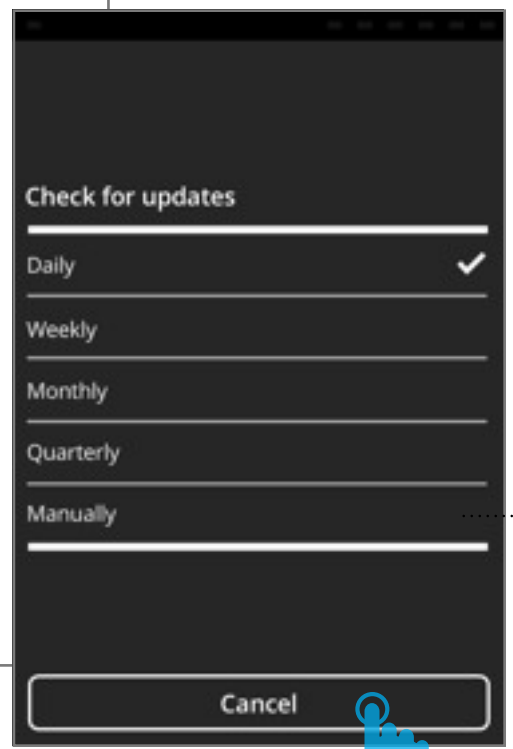

Check for updates manually from Settings > Apps

Settings

Need to add:  
Zero-rated APN options?

"Manually" prevents automatic scheduled updates.

Review & Initiate:  
System Update Utility

Need to confirm FxOS  
release note formatting.

**What's New:**  
Enables user to review release notes. If text exceeds 7 lines it is truncated and a More Details toggle added.

**More Details button:**  
Expands the "What's New" text area to full height.

**Download over WiFi only toggle**  
When set to True, update downloads and scheduled checks will only happen when WiFi is Connected.

**Display:**

- Icon
- Update version
- Download size

**Later:**  
Defer download and close Utility. User will be reminded at next scheduled update check.

Expanded "What's New" text area

**Download:**  
Initiate update download and close Utility.

Need to add:  
Zero-rated APN options?

# Downloading: App Update

App Update Utility

Multiple app updates can download simultaneously.

## User presses individual update button

- File Size text is replaced with "Downloading..."
- Individual "Download" button changes to "Downloading" icon.
- Downloading tab counter is updated.
- Row is removed next time user opens "Updates" tab.

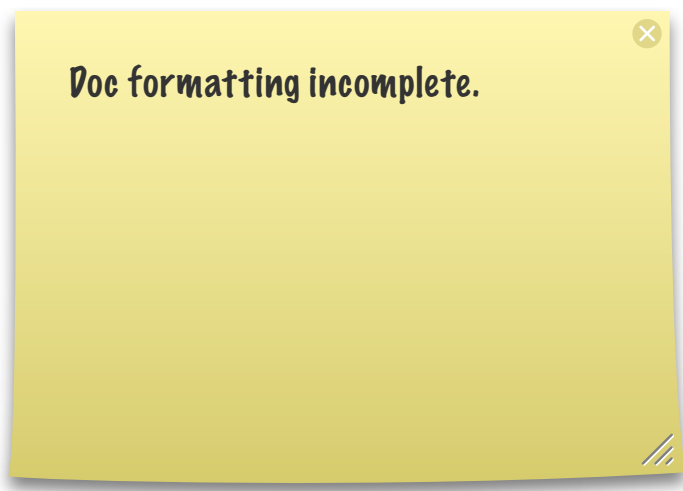

## User presses "Update All"

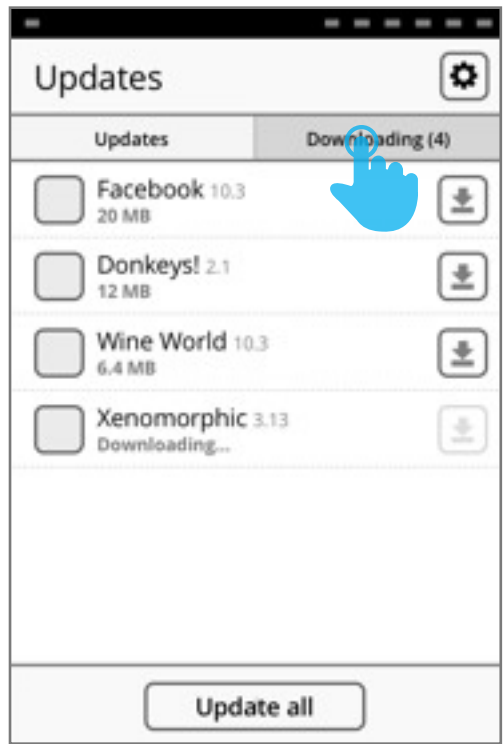

- Same results as when user presses individual update button (see above), except applied to all updates at same time:
- "Update all" button is disabled if there are no available downloads:

## No updates available:

- Edge case, wherein user opens App Update Utility via a link that goes directly to "Downloading" tab, and then opens Updates tab when there are no available updates.

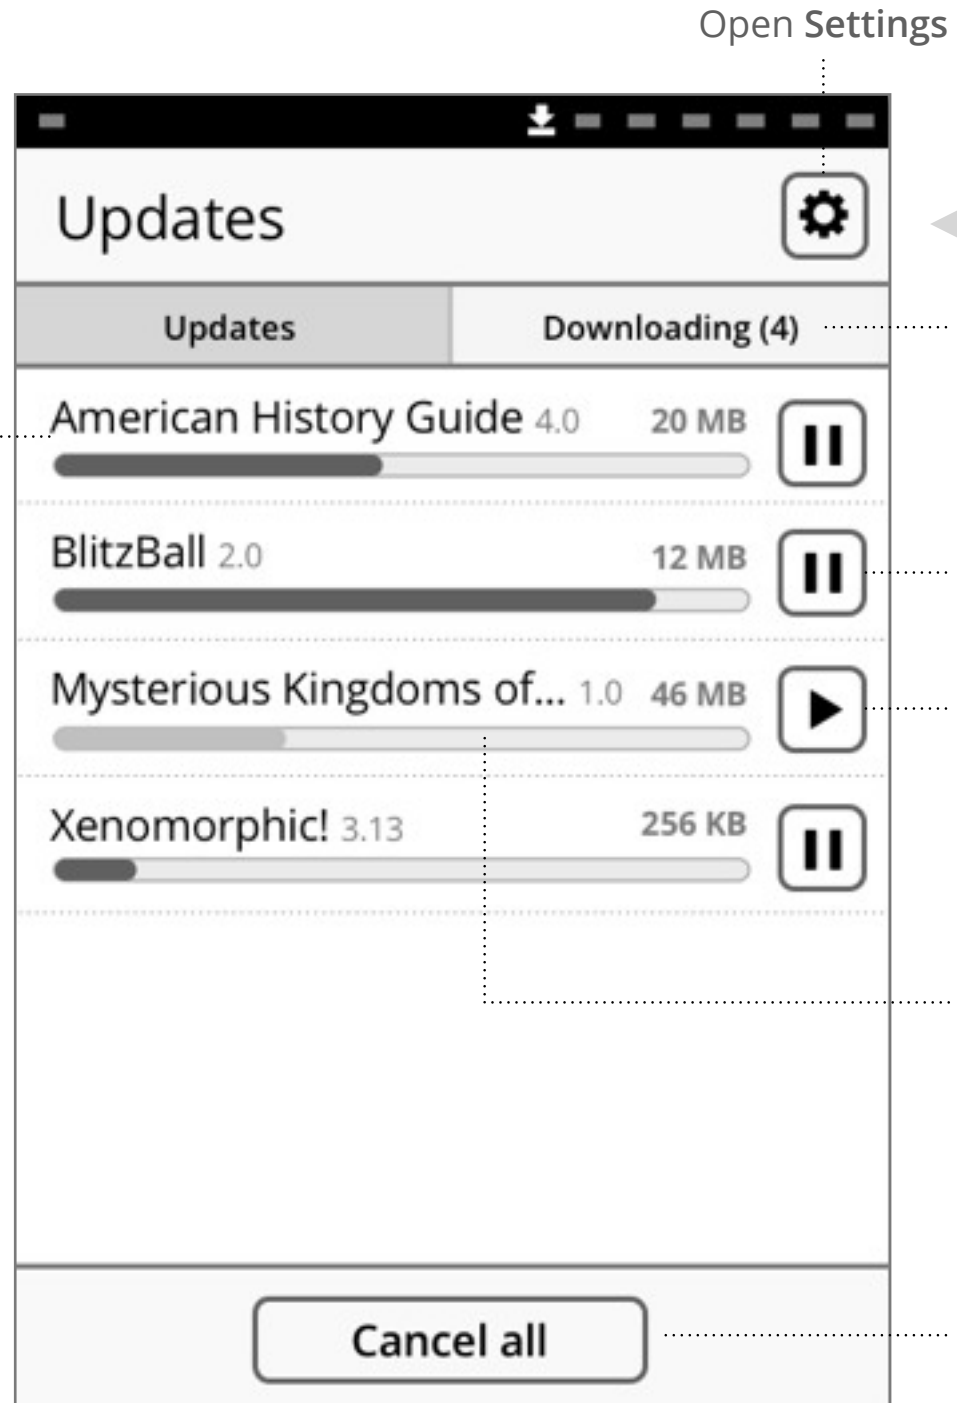

App Update Utility

Once apps are downloading, the "Downloading" tab provides tools for tracking progress, pausing, and cancelling.

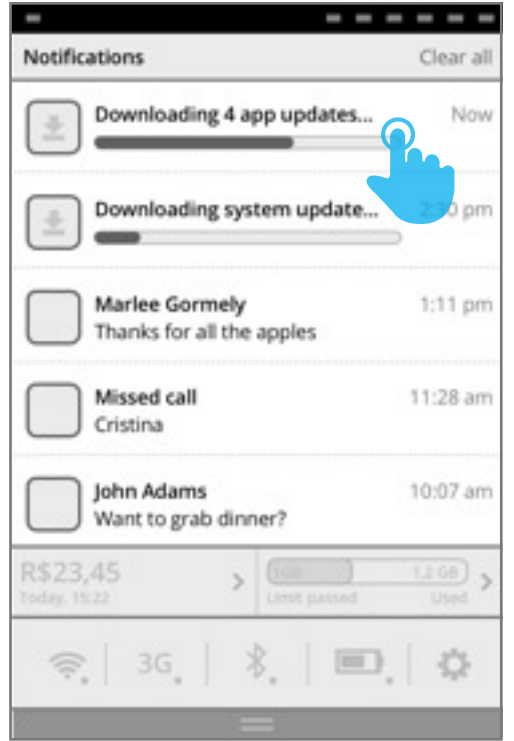

Alphabetical list of active downloads. Each displays:
• App name
• Version number
• Download size
• Progress bar
• Buttons

Downloading tab

Open Settings

Annotations for the 'Downloading' tab:
- Tab title displays number of active downloads
- Pause individual download
- Resume individual download
- Paused progress bar
- Cancel all active downloads

Notification Center progress bar display download status.

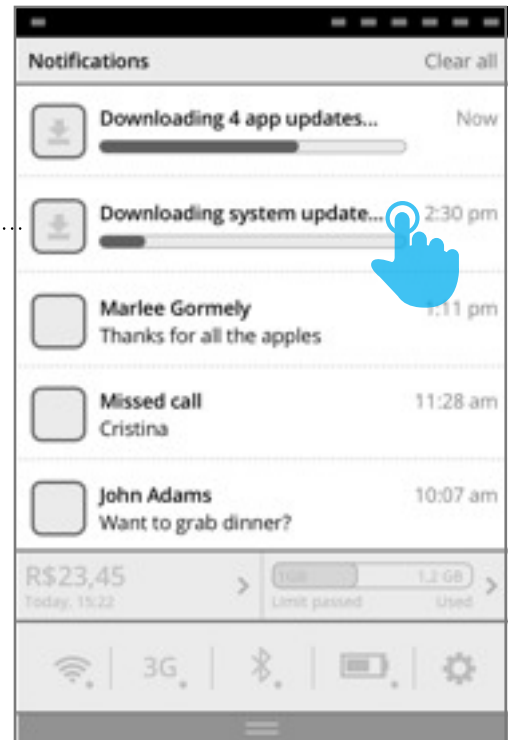

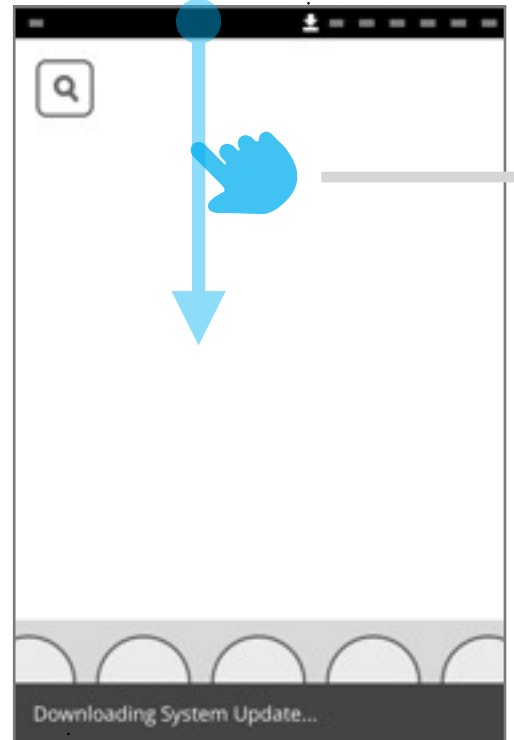

- Icon: downloading icon
Title: "Downloading N app updates..."
Body: progress bar (aggregate of all active app downloads).
• On press, open App Update Utility > Downloading tab.

Downloading: System Update

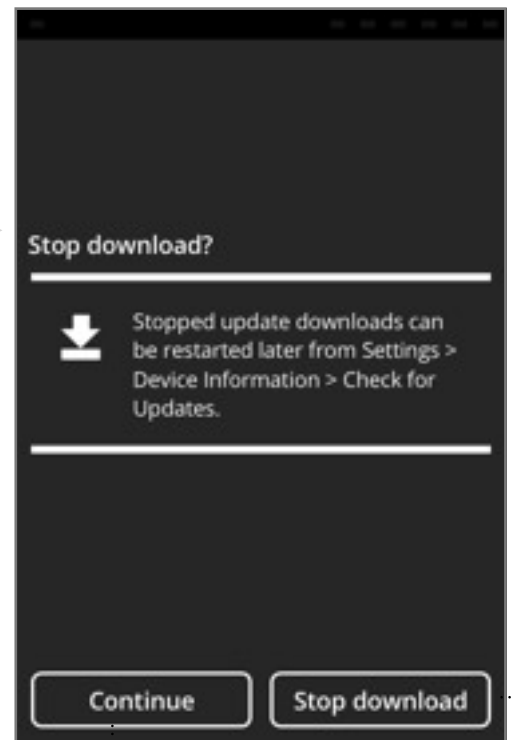

System Update Utility

"Downloading" indicator

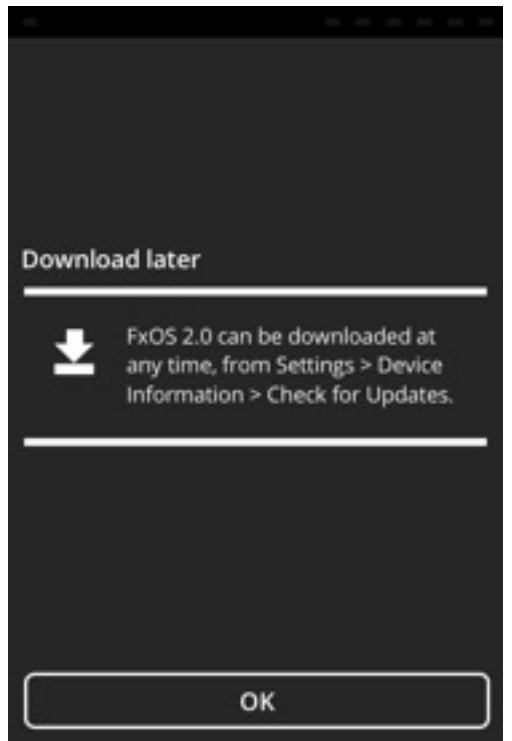

"Stop Download?" prompt

User presses "Later":

- System Update Utility closes and user is returned to previous screen.
- Prompt appears: "Download later", with tip on how to start update at later time.

User presses "Download":

- System Update Utility closes and user is returned to previous screen.
- Banner appears: "Downloading system update..."
- Status bar indicator appears whenever a download is active.

Notification Center progress bar.

- Download progress is displayed inside Notification Center.
- **Icon:** downloading icon
- **Title:** "Downloading system update"
- **Body:** progress bar
- On press, open "Stop download?" prompt.

Continue:

- Prompt closes
- Download continues.

Stop download:

- Prompt closes.
- Progress bar is removed from the Notification Center.
- Download stops.

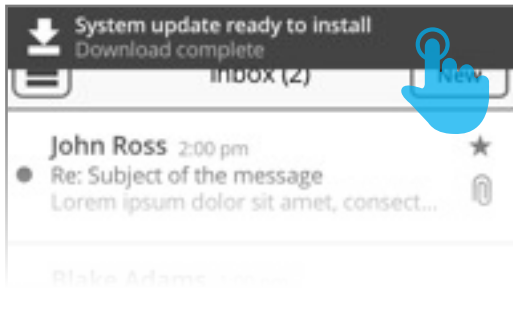

# Install: System Update

System update download complete

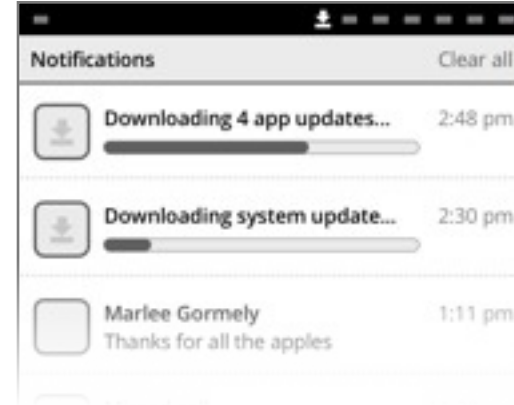

Is Home app in the foreground?

No

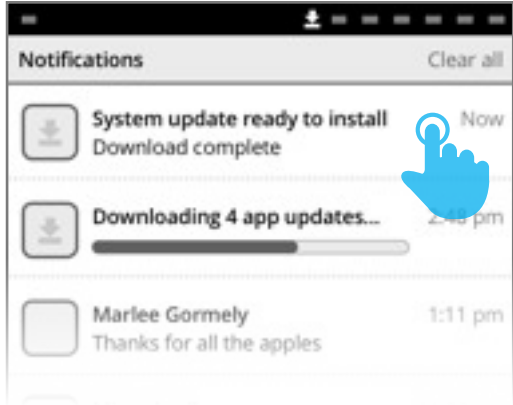

Open Prompt: "System update ready to install"

Update Notification Center progress bar:

Before

After

Open System Update Utility

System Update Utility: Install view

On device unlock: If user has not initiated install flow by next time device is unlocked, then present "System update ready" at Home screen after they unlock.

Defer installation and close Utility. User will be reminded at next scheduled update check.

**Connect to charger**

Battery is low. Device must be connected to a power source before update can be installed.

**Cancel**

**Install later**

FxOS 2.0 can be installed at any time, from Settings > Device Information > Check for Updates.

**OK**

Need to add details on flow after user presses "Install" on System Update.

Need to add details on difference between Full System and Gaia+Gecko
