Version history

V0.1 draft	[06/24/2014]	[Carrie Wang]	Add call length in call log so that users can see how many call minutes have been spent on each call.
V0.2	[07/17/2014]	[Carrie Wang]	Relayout the call info page. Remove some irrelevant functions in the call page to differentiate the page with the “real” Contact details page. Remove the call type icons on call info page Separate calls dialed from the same contact but different numbers into different call logs.
V0.3	[07/22/2014]	[Carrie Wang]	Remove the personal info section. Add the Call type back and add the phone number on the call info page. Display both phone buttons but address the related one in different colour if the contact has more than one number.
V0.4	[07/25/2014]	[Carrie Wang]	Add Contact details on the call info page.

[View details](#)

Call info of the existing contact

A

B

C

A This page is triggered from call log and belongs to the tab “call log”. It displays Date (subheader), used number, Call type, Time stamp and Call duration of that call.

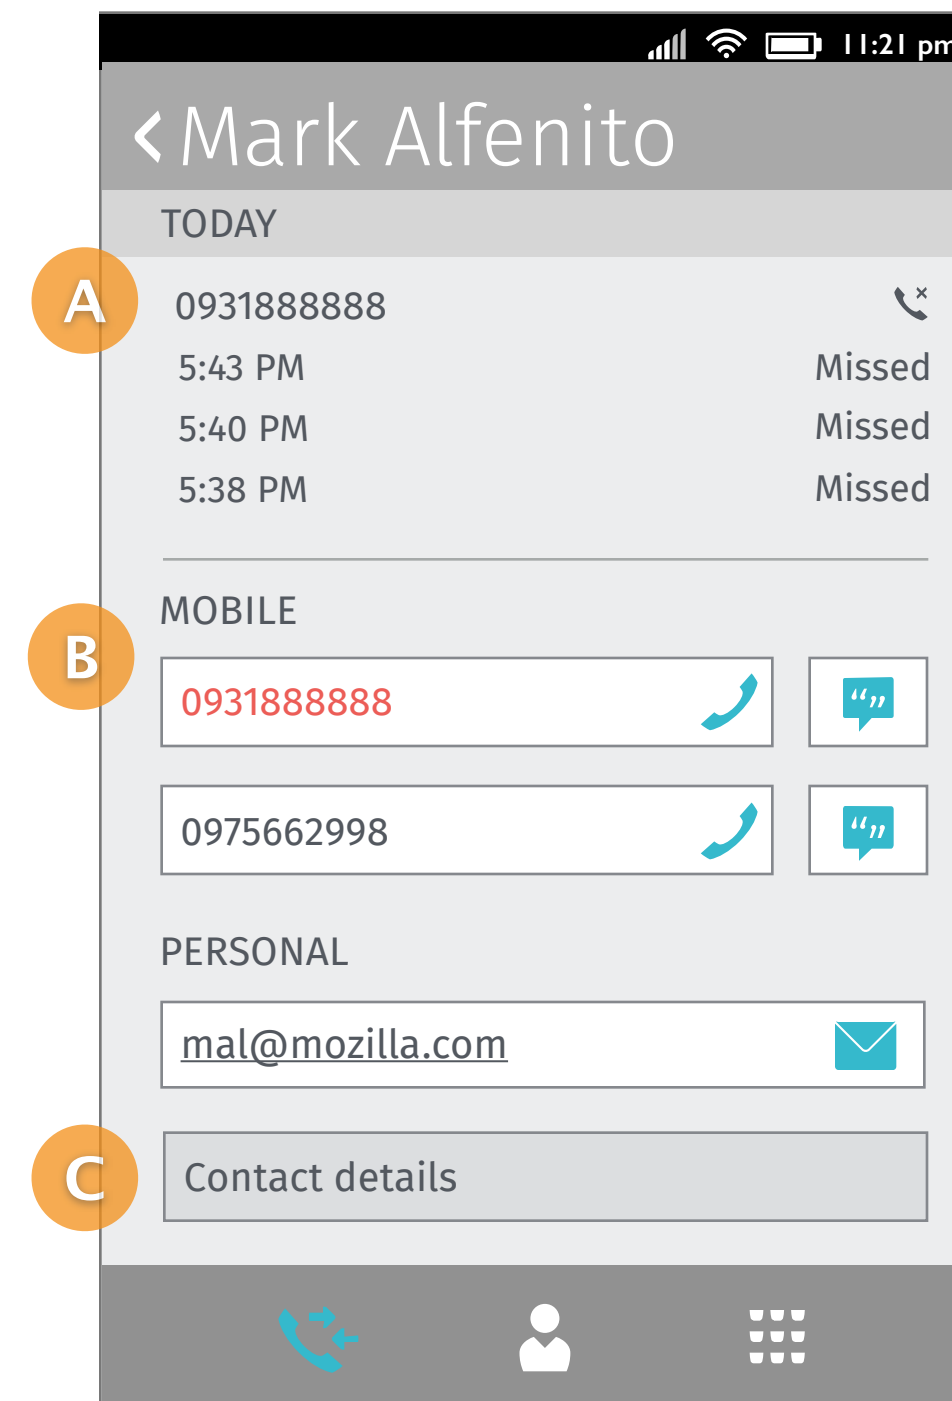

we adopt “min” and “s” as the abbreviation of “minutes” and “seconds” to display the call length. If the call is canceled, it shows “Canceled” as Call duration, and if it’s a missed call it shows “Missed”.

We don’t really restrict the number of the call logs displayed on this page. If there are more than one page, users can scroll to view all of them.

B The call and message buttons are displayed underneath the call info. If user has set email in Contacts APP, it will display in this area.

If the contact has set more than one number, the one related to the call log will display in different colour (blue for normal calls, red for missed calls).

Call info of the existing contact (Missed call)

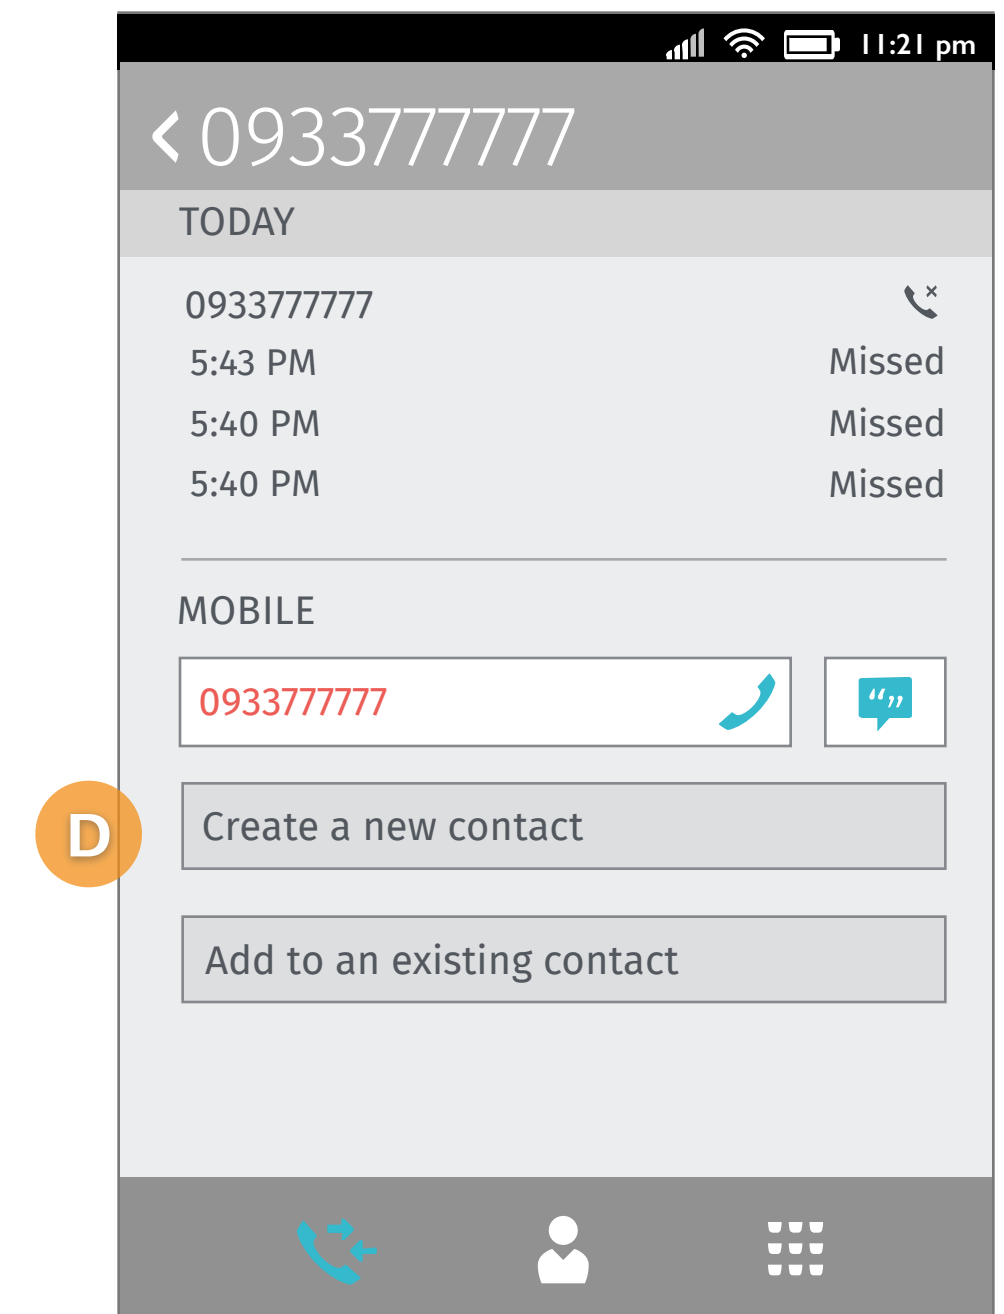

A

B

C

C The action button “Contact details” allow users to access the corresponding contact info (switch to the Contact tab).

Call info of the unknown numbers

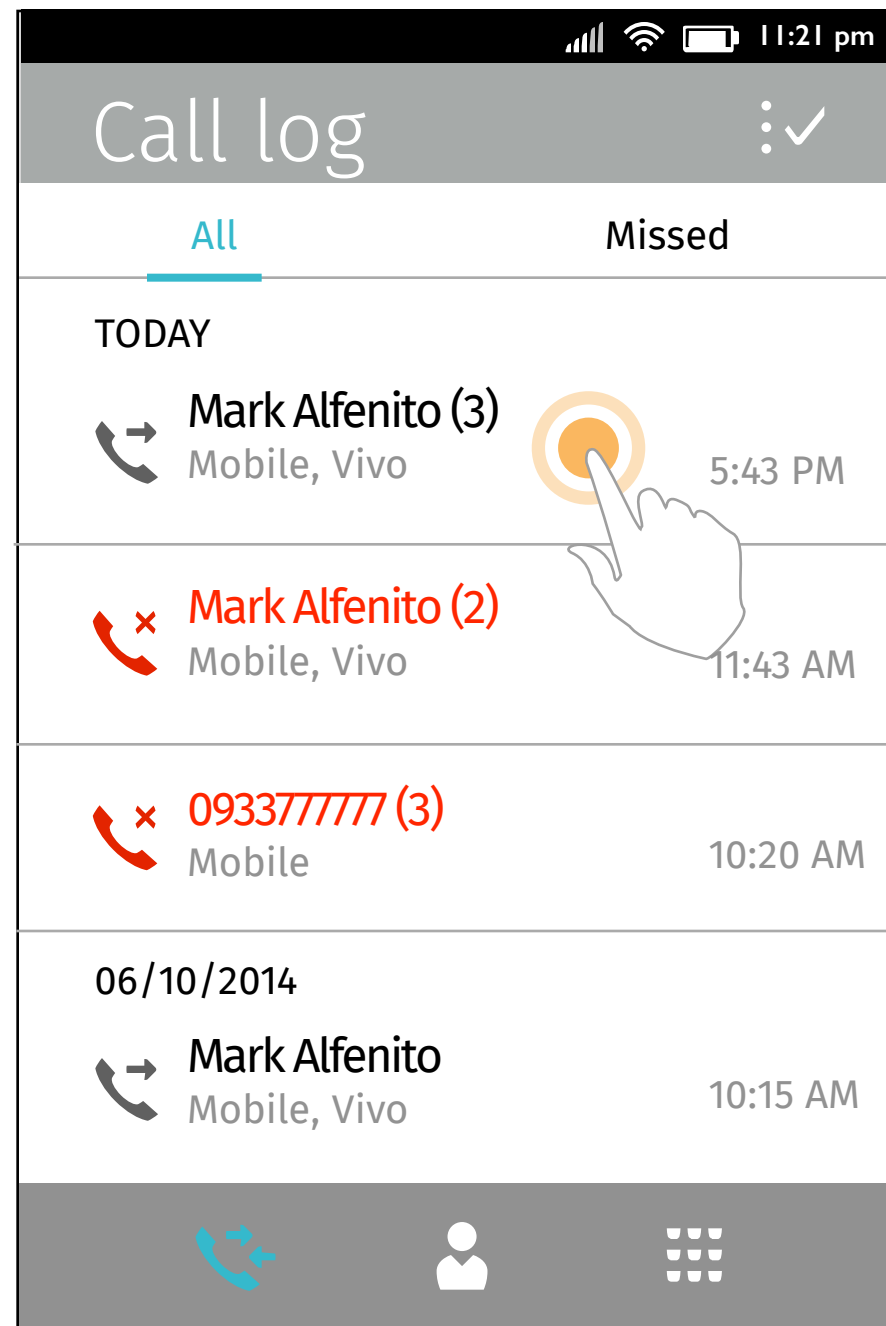

D

D If it’s an unknown number, it will show call button (with numbers on it), message button. In addition, there will be “Create a new contact” and “Add to an existing contact” buttons at Personal information section.

Interaction

Tap to call and Long-tap for more options (existing contact)

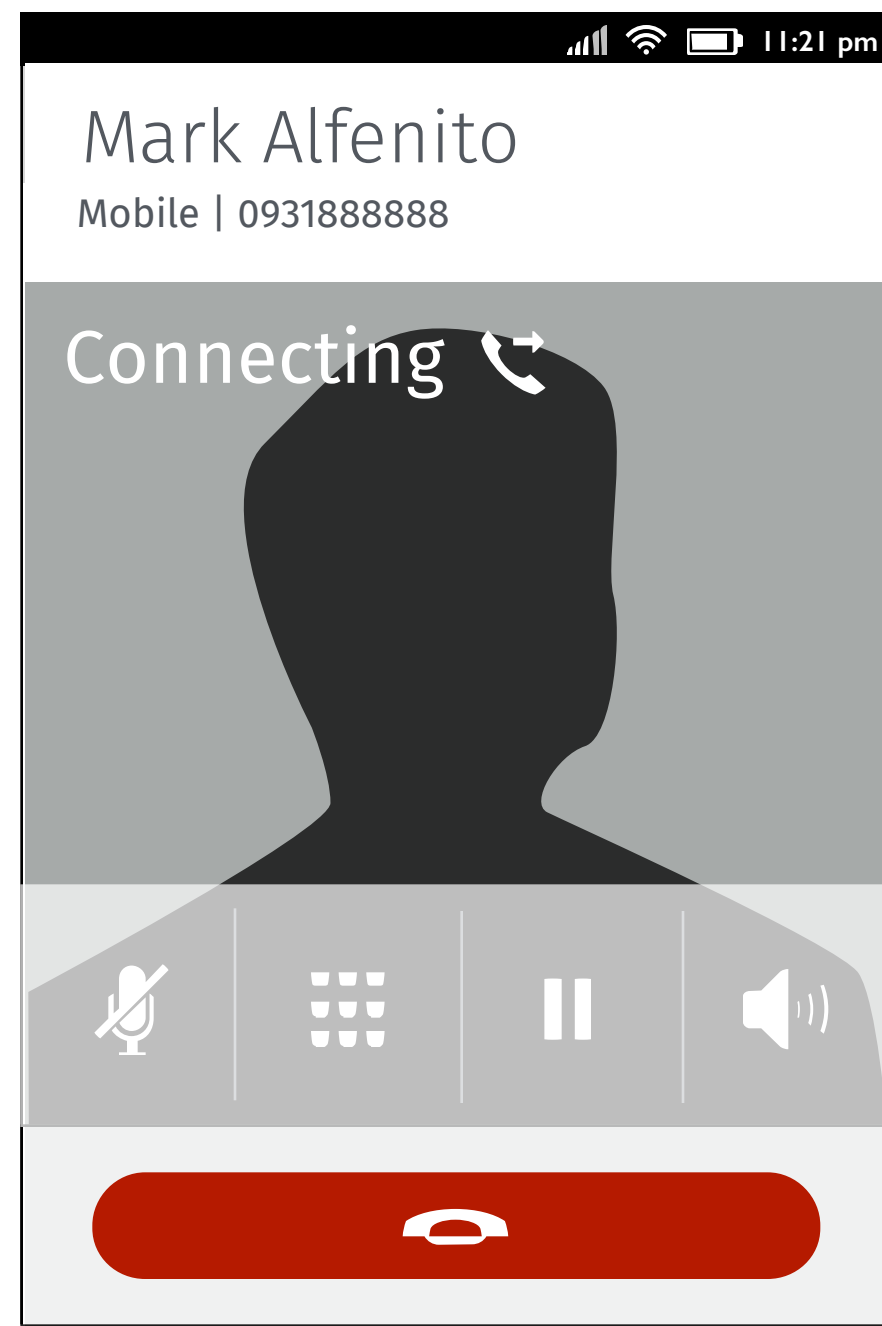

1. [Call log]

The user taps a call log to Screen 2.

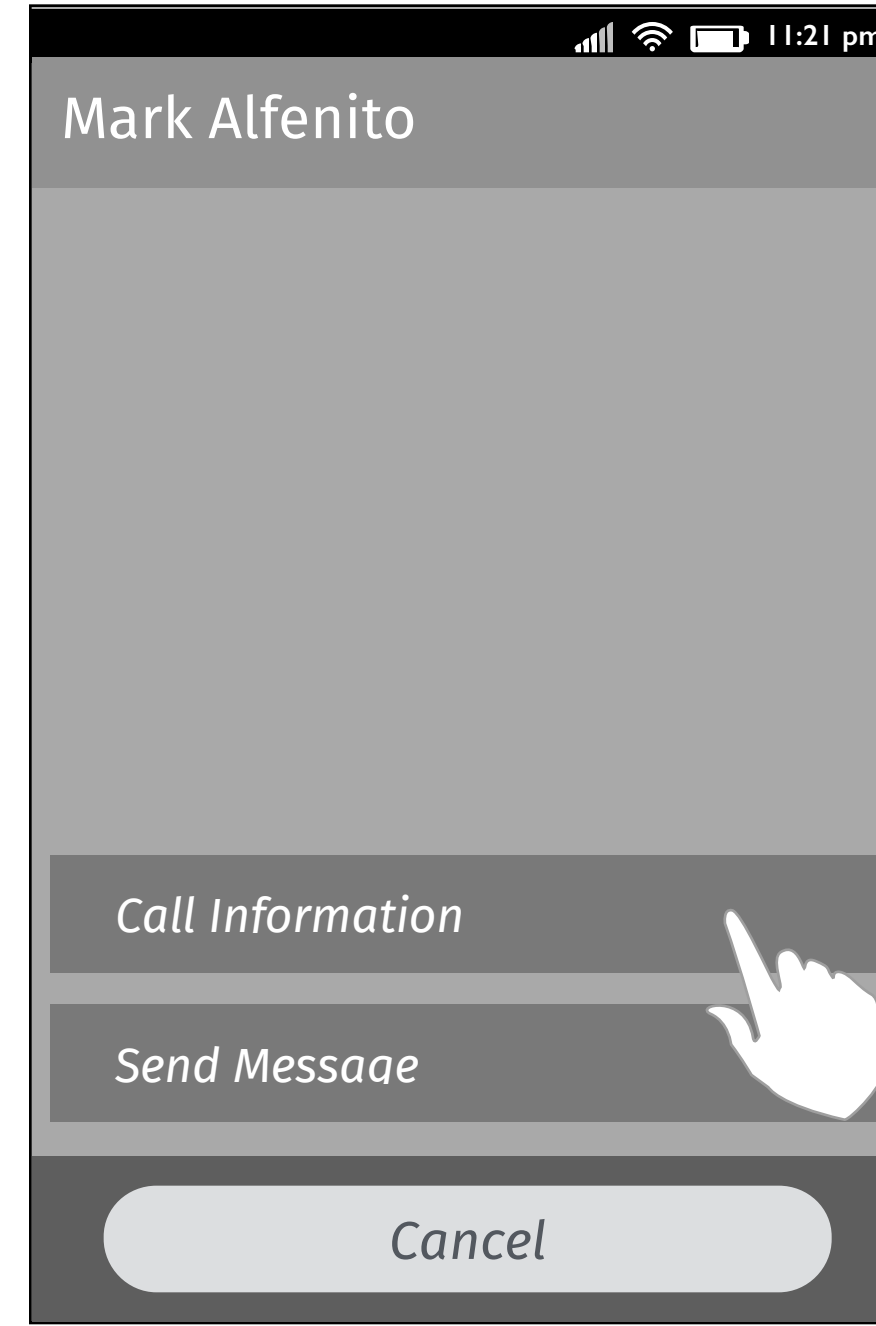

The user long-taps a call log to Screen 3.

2. [Call page]

The call is dialing out.

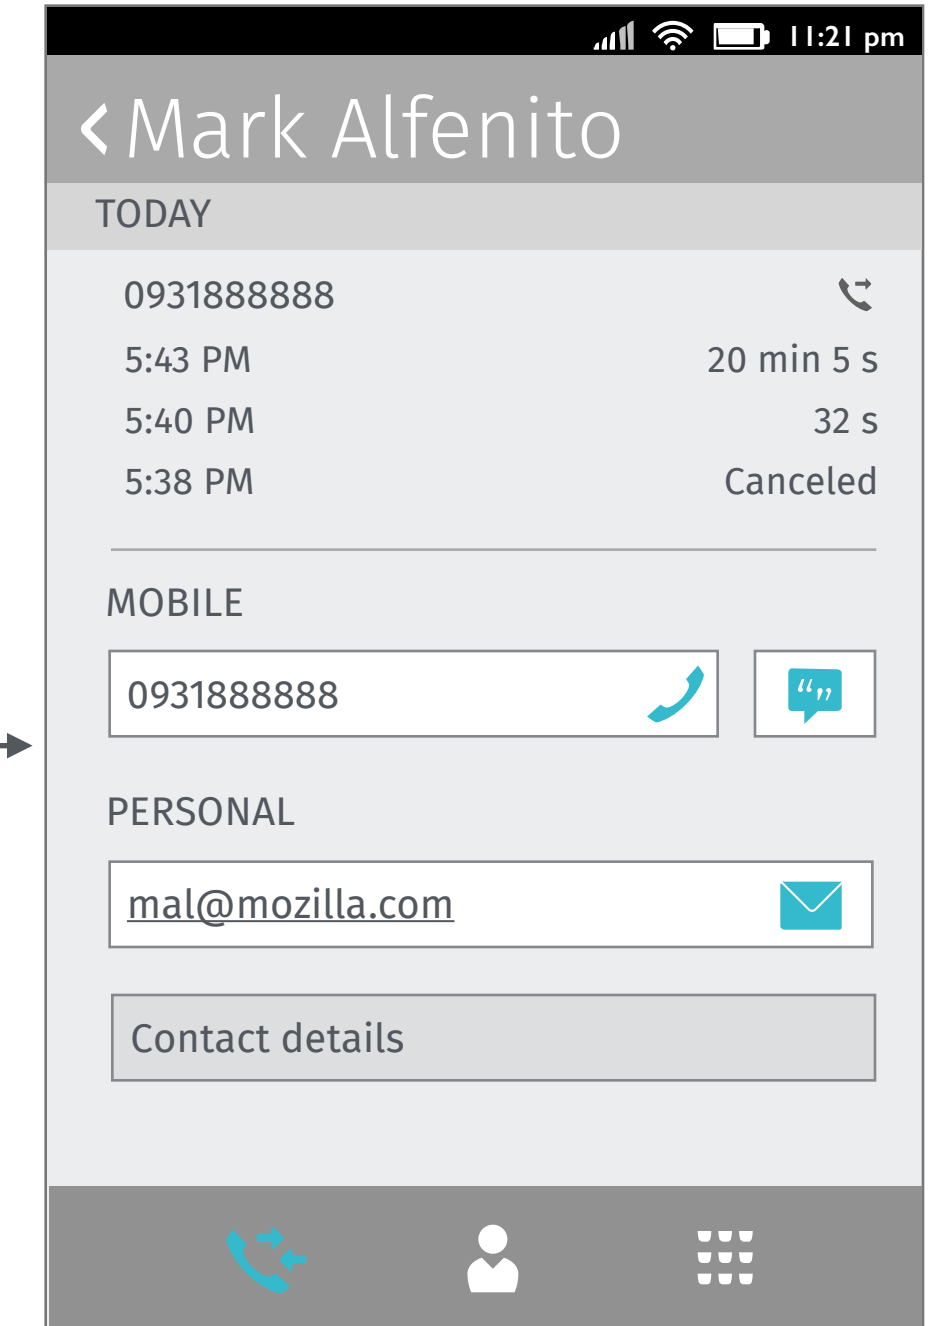

3. [Action menu]

The object menu pops up with two options "send message" and "call information" displayed.

Tap "Send Message", the user will be directed to Messages APP with numbers prepopulated.

3-1. [Call info]

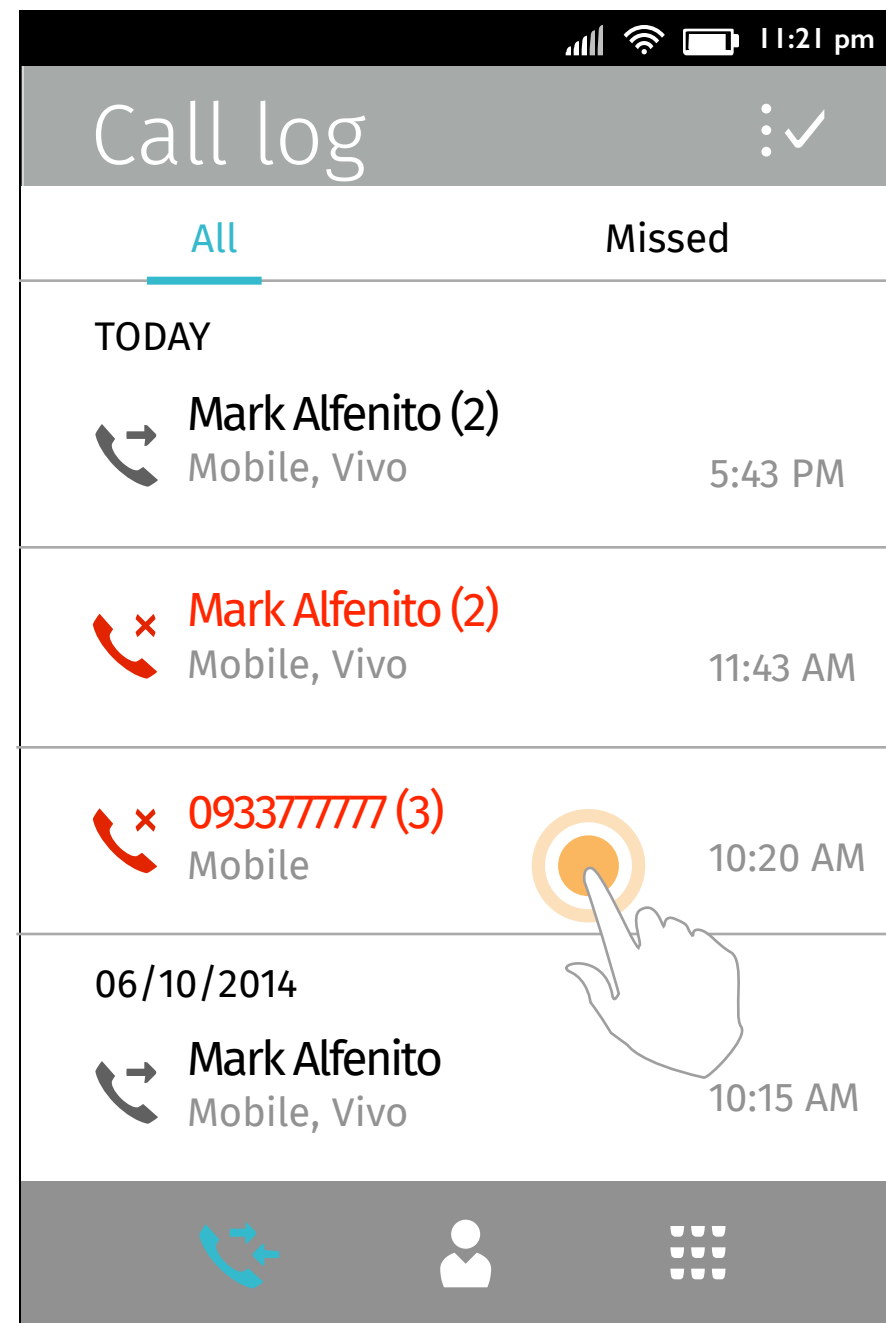

The page slides in with displaying the call info.

Taps back button to get back to Screen 1.

Long-tap

Tap to call and Long-tap for more options (unknown numbers)

1. [Call log]

The user taps a call log to Screen 2.

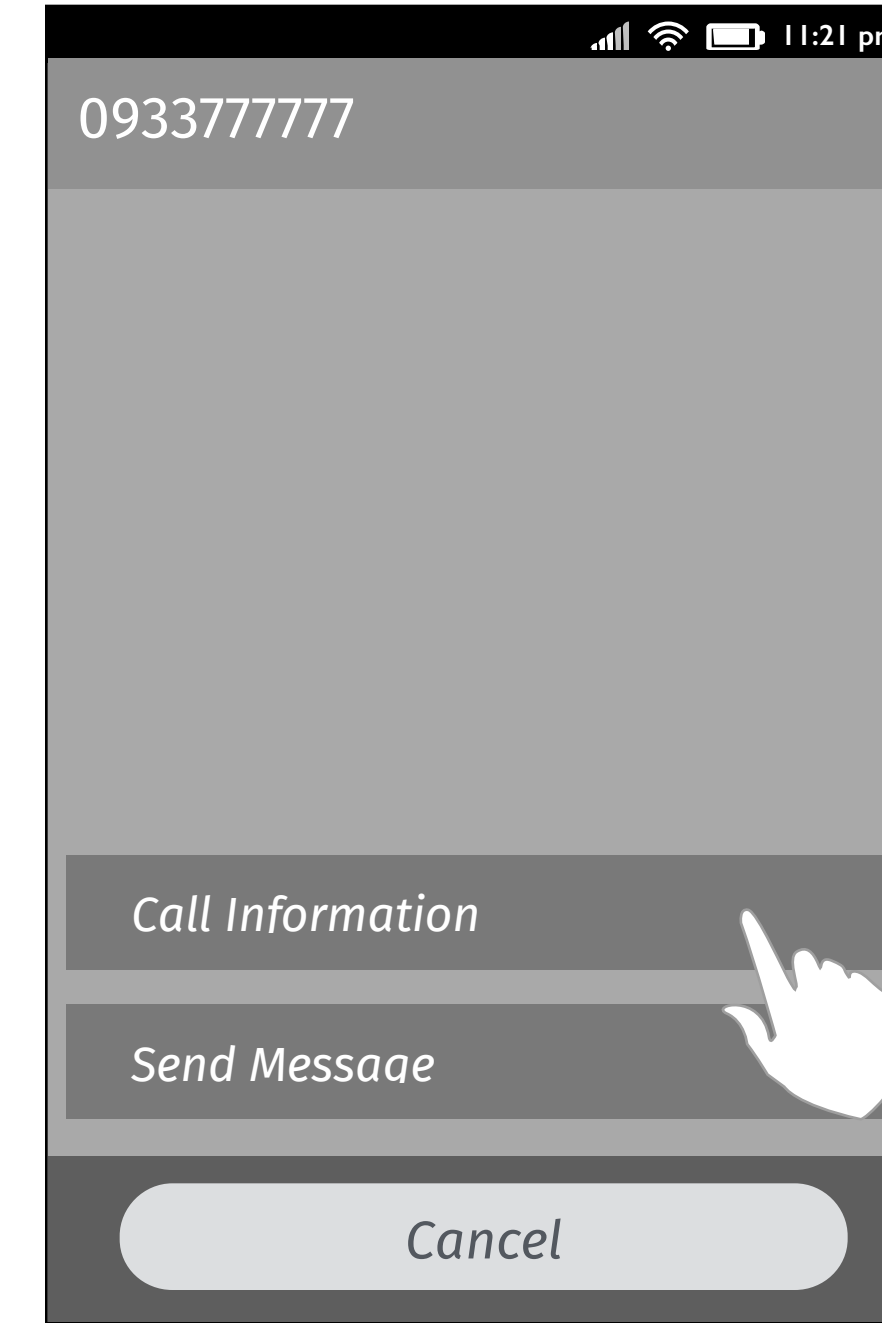

The user long-taps a call log to Screen 3.

2. [Call page]

The call is dialing out.

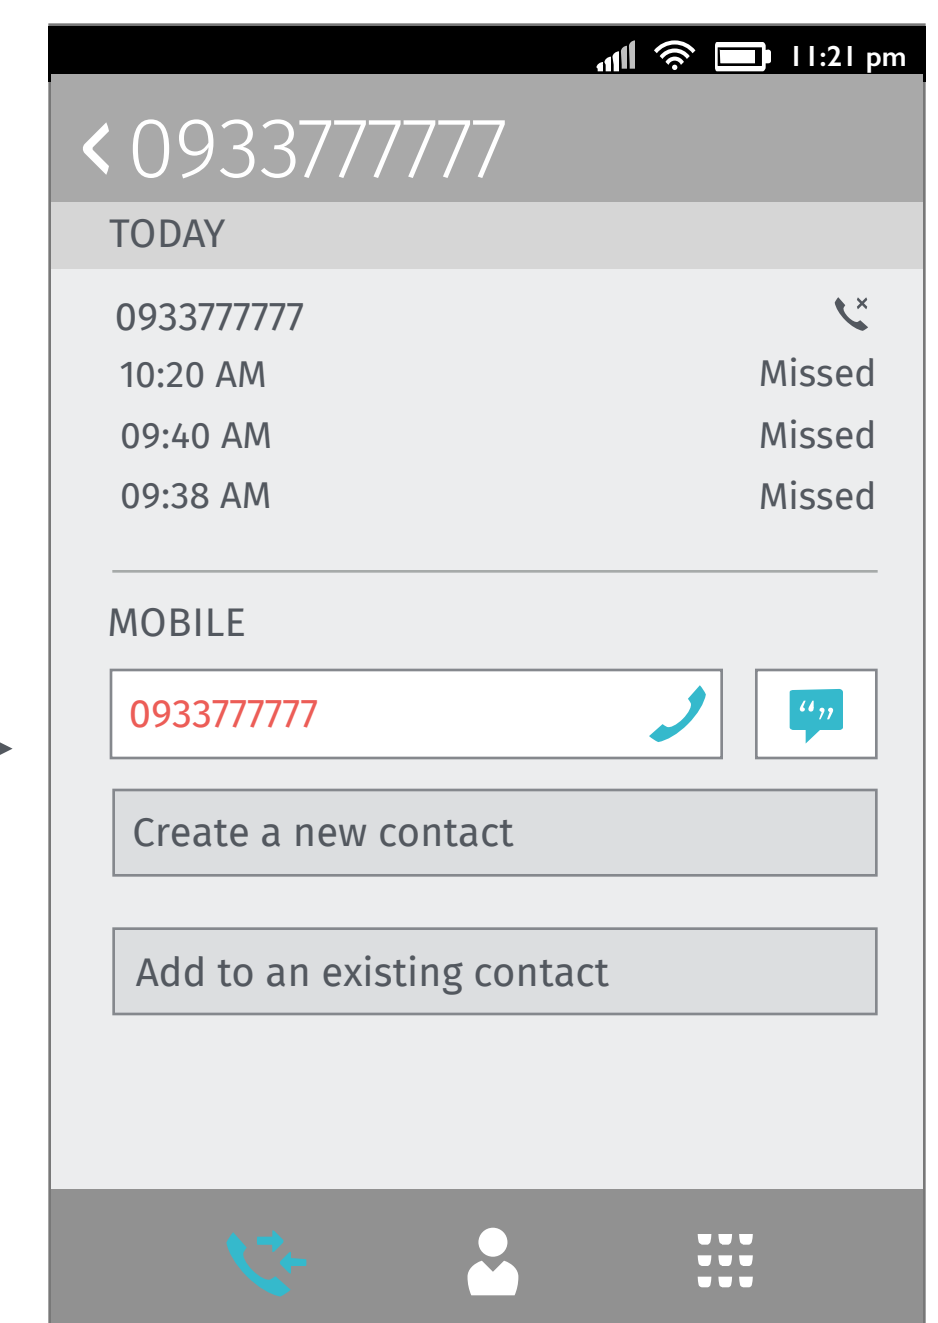

3. [Action menu]

The object menu pops up with two options “send message” and “call information” displayed.

Tap “Send Message”, the user will be directed to Messaging APP with numbers prepopulated.

3-1. [Call info]

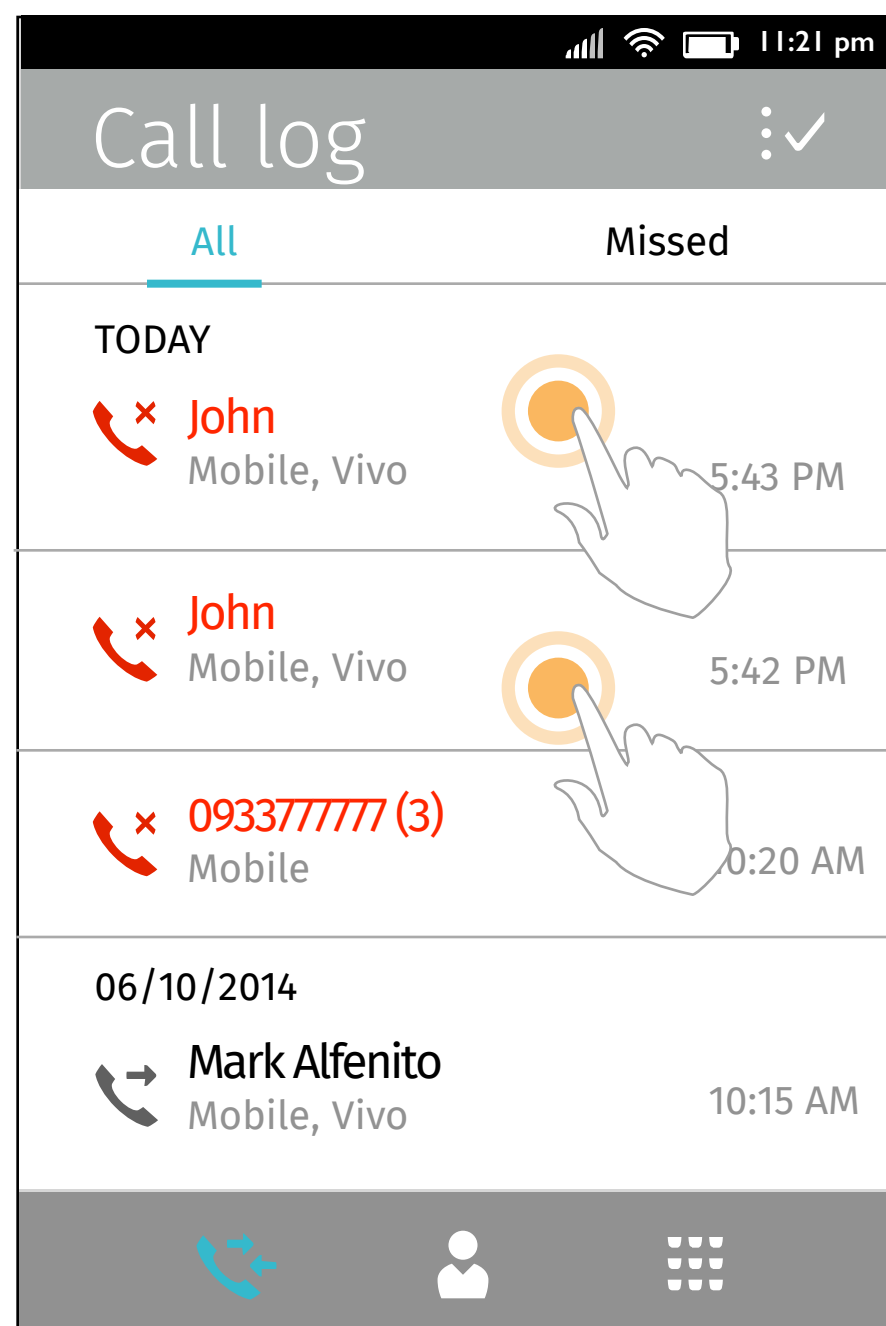

The page slides in with displaying the call number on header and the call info.

It also provides call, message, “Create contact” and “Add to contact” buttons. Tap “Create a new contact”, the contact edit page slides in. Tap “Add to an existing contact”, the contact picker pops up.

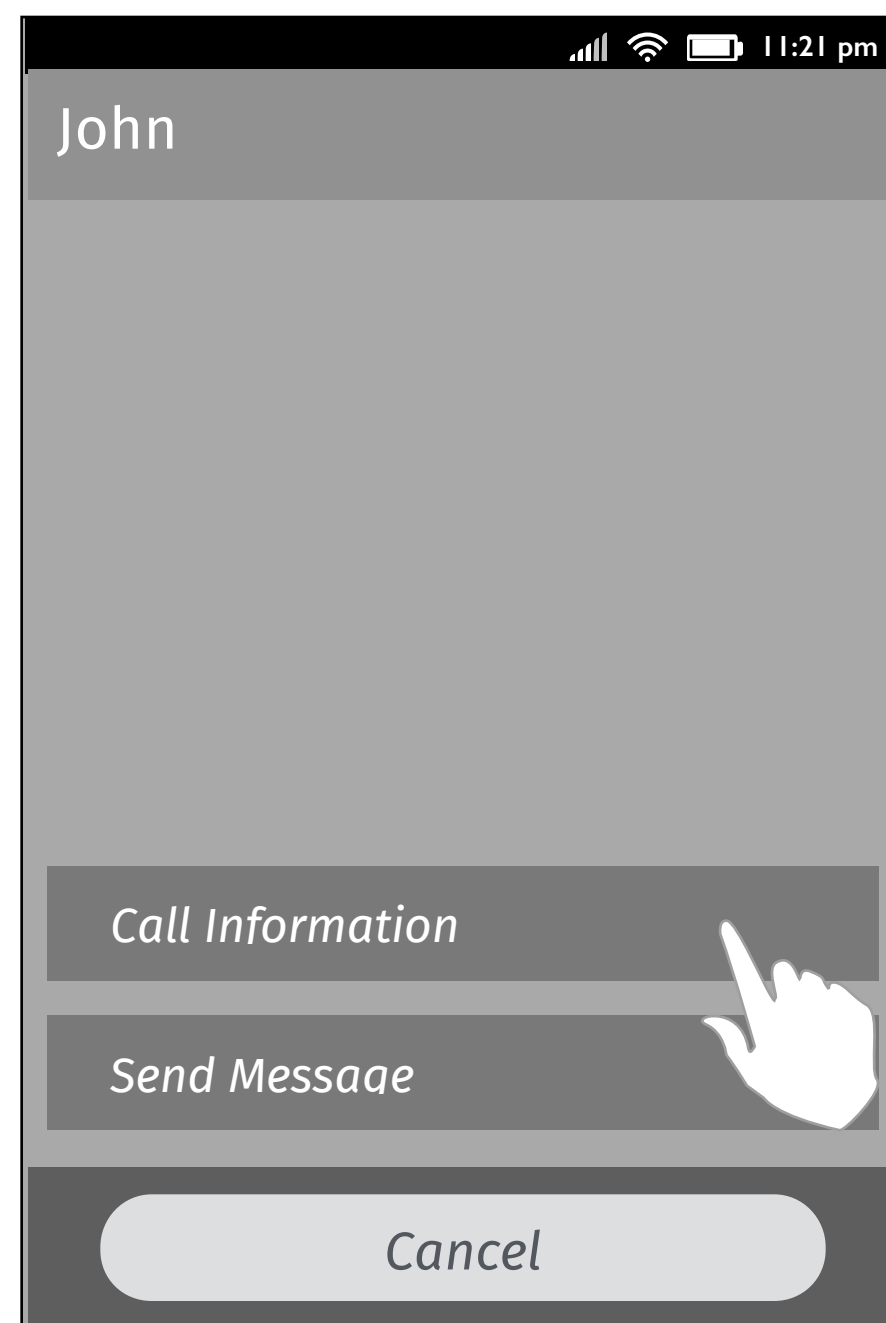

Long-tap

Tap to call and Long-tap for more options

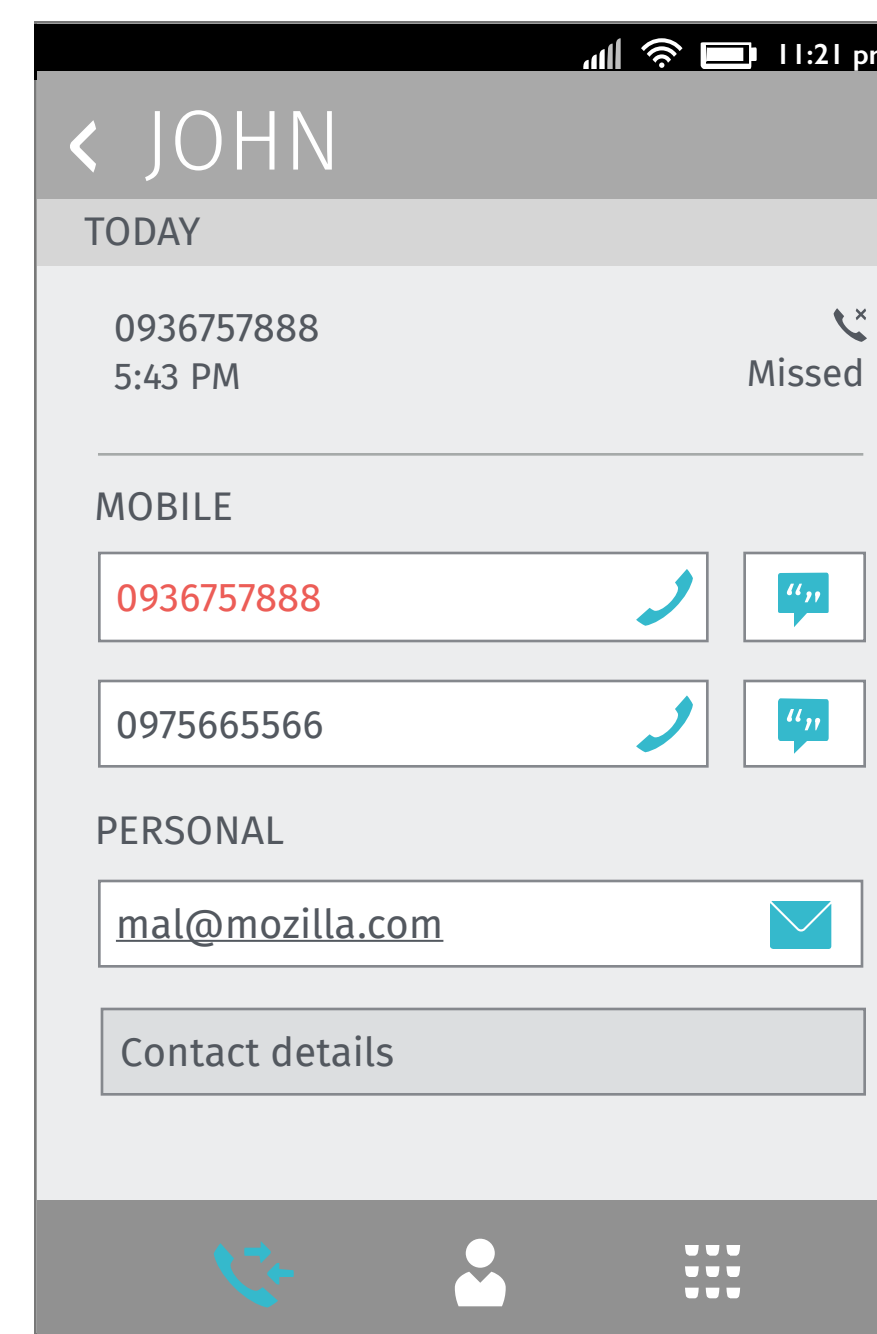

1. [Call log]

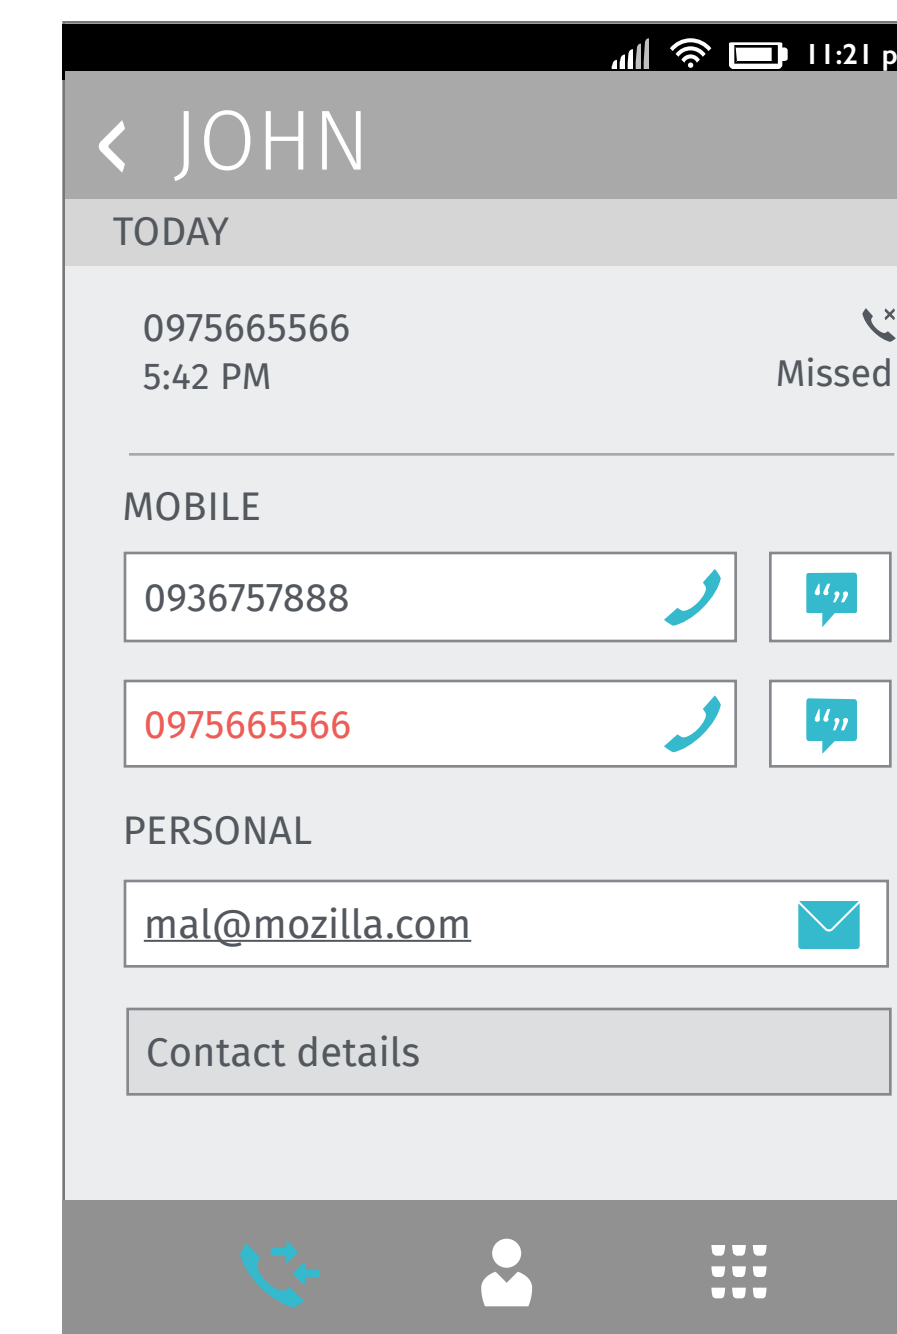

2. [Action menu]

3-1. [Call info]

3-2. [Call info]

The contact "John" called from two different numbers successively and the calls will be separated into two different call logs.

The user taps the 5:43 call, go Screen 2 -> 3-1.

The user taps the 5:42 call, go Screen 2 -> 3-2.

The object menu pops up with two options "send message" and "call information" displayed.

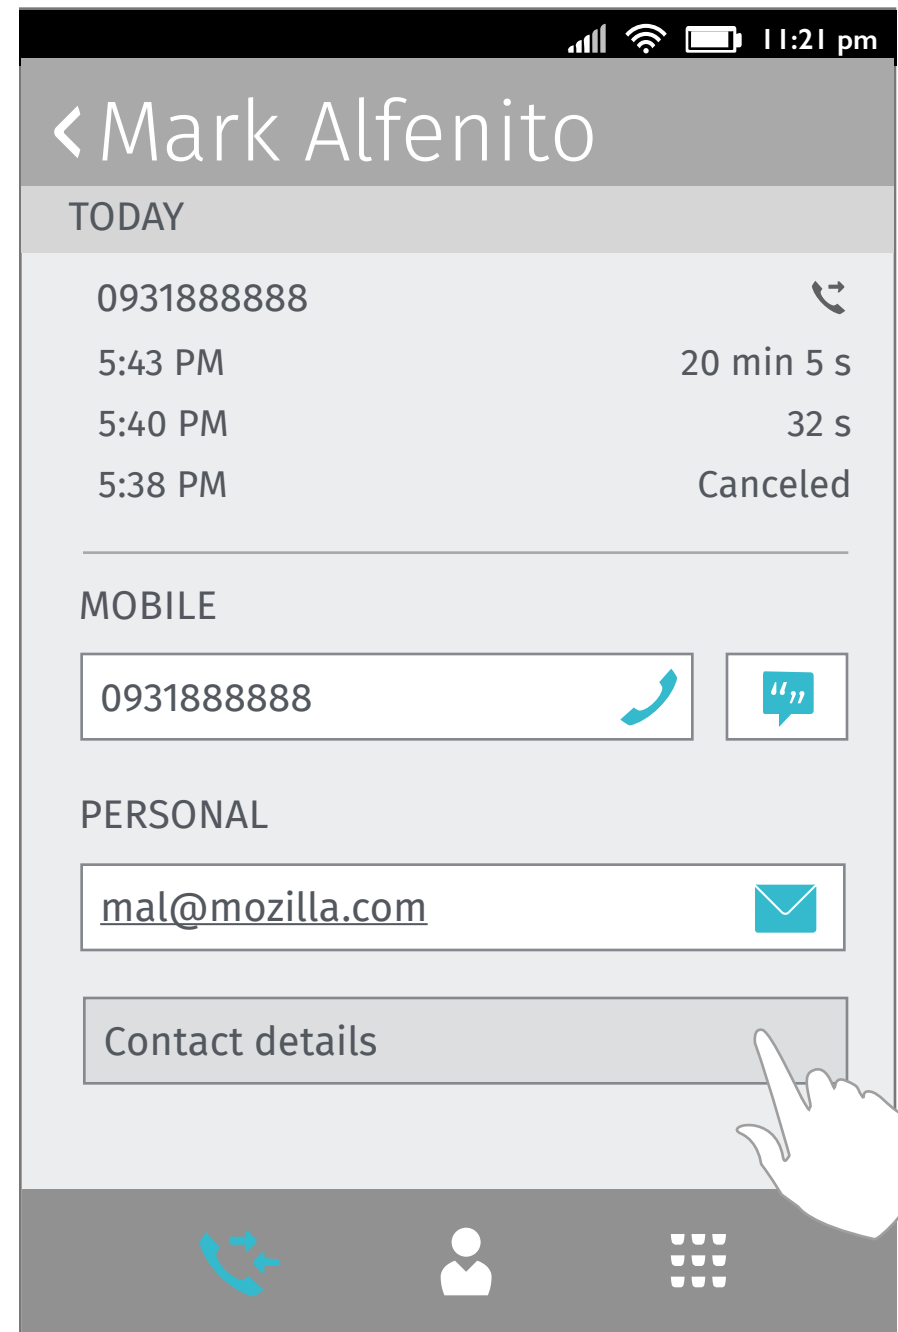

Tap "Send Message", the user will be directed to Messaging APP with numbers prepopulated.

This is the call dialed from 0936757888 at 5:43 from the contact John.

This is the call dialed from 0975665566 at 5:42 from the same contact John.

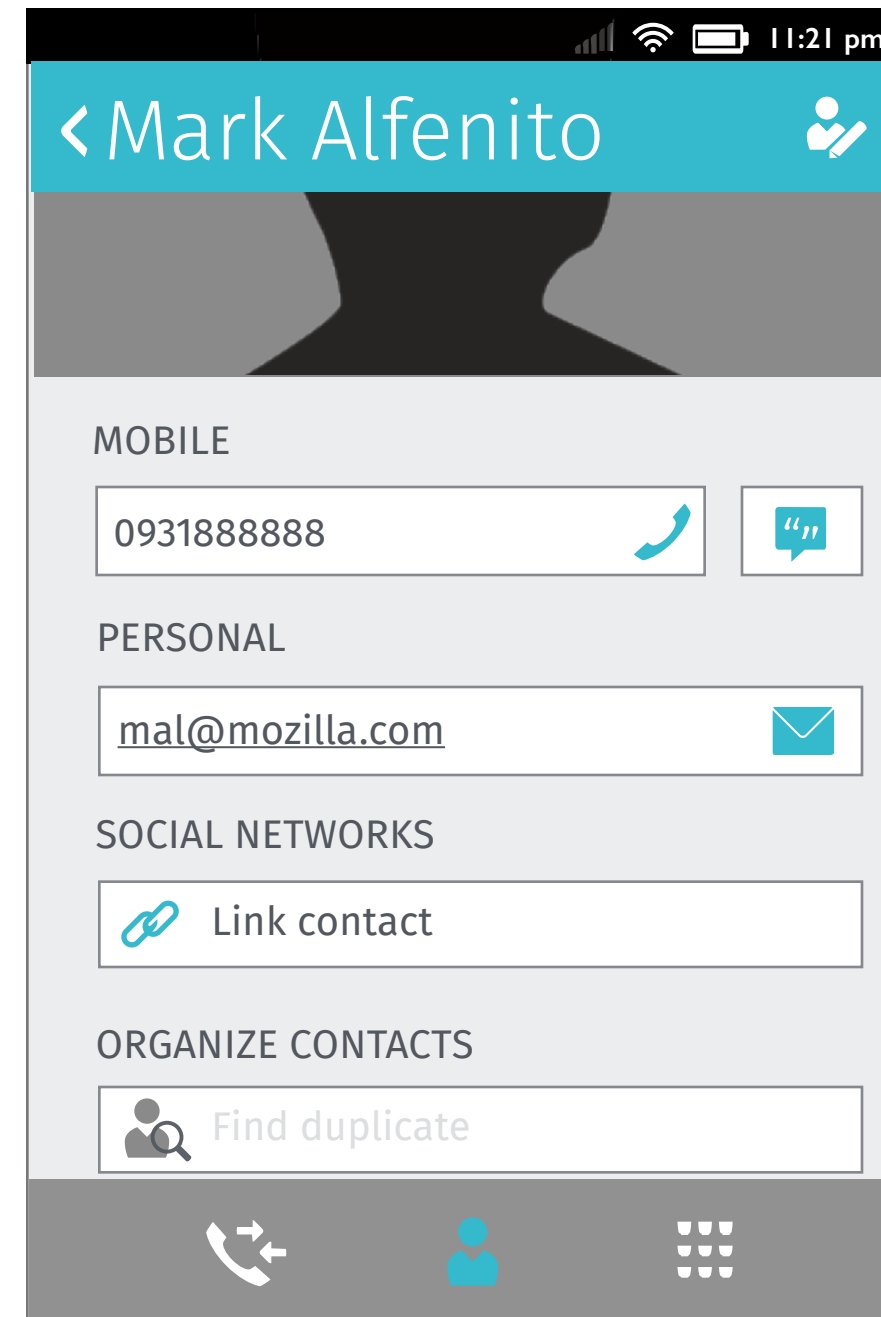

Access contact details from Call info page

1. [Call info]

User taps the “Contact details” to access that contact’s information.

2. [Contact details]

The user will be directed to the Contact tab in the middle of the bottom and the corresponding contact details will display here.

Tap back button to get back to Screen 1 and the tab will switch to call log.
